	Number of pups examined	159	157	139 <sup>b</sup>	134
	Number of pups with abnormal findings	2 ( 1.48 )	1 ( 0.57 )	6 ( 4.11 )	4 ( 2.75 )
	Findings <sup>a</sup>				
	Found dead	2 ( 1.48 )	1 ( 0.57 )	6 ( 4.11 )	4 ( 2.75 )

(to be continued)

Values in parentheses represent the means of incidences of pups with abnormal findings (%; the litter is the unit evaluated).

a: Values represent the number of pups that showed abnormal findings.

b: Including one animal that was not distinguished its sex because of maternal cannibalism.

Table 33 (continued-1) General appearance in F1 and F2 male rat pups and weanlings during postnatal days 0-26 treated with 1,2,5,6,9,10-hexabromocyclododecane (HBCD) in the two-generation reproductive toxicity study (SR04222)

Surface righting reflex, negative geotaxis reflex and mid-air righting reflex were examined on postnatal day 5, 8 and 18, respectively.

Completion ratio (%) = (number of animals showing positive response/number of animals examined) x 100.

Values in parentheses are the number of animals examined.

\*: Significantly different from the control at  $p \leq 0.05$  by Wilcoxon rank-sum test.

<sup>ss</sup>: Significantly different from the control at  $p \leq 0.01$  by Mann-Whitney U-test.

Table 39 Autopsy findings in F1 and F2 male rat pups euthanized on postnatal day 4 or found dead on postnatal days 0-4 treated with 1,2,5,6,9,10-hexabromocyclododecane (HBCD) in the two-generation reproductive toxicity study (SR04222)
