NEC Corporation

	Companies' approach
□ Background and purpose of accounting	<ul style="list-style-type: none"> • As our own business operations are becoming in part outsourced, the focus of environmental factors has been shifting to the outside accordingly. In this context, we have become increasingly aware of the need to perceive our environmental impact as a whole across our entire supply chain. • In addition, our supply chain emissions accounting is also meant to respond to requests from stakeholders for information disclosure.
□ Utilization of accounting results	<ul style="list-style-type: none"> • Findings from our accounting are made publicly available in our environmental reports, etc. as a result of environmental activities. • We intend to keep track of developments in CO2 emissions through comprehension of them by category, thereby setting out measures to be taken in the future.
□ Benefits of accounting	<ul style="list-style-type: none"> • By keeping track of changes over time, we will be able to better understand the extent of our impacts by category. • We will become more aware of our group's internal environmental activities through cooperative efforts with other departments for emissions accounting. • We will be more highly appreciated in external evaluation.
□ Internal system for accounting	<ul style="list-style-type: none"> • Environmental data are collected from NEC Group companies' environmental departments and divisions. In addition, accounting and logistics, etc. also provide relevant primary information. • Furthermore, the environmental management promotion office obtains emissions-related data from our suppliers as well to account for such emissions.

	Companies' approach
<p>❑ Efforts to reduce supply chain emissions</p>	<ul style="list-style-type: none"> • Emissions resulting from the use of sold products have been a major contributor, representing a large percentage of our overall emissions. Accordingly, we have been seeking continued improvement in performance of our products during use. • Meanwhile, emissions from outsourced manufacturing operations are not covered by Scope 1 and 2 in accounting, and therefore we will be looking to reduce these Scope 3 emissions in cooperation with our outside stakeholders such as suppliers.
<p>❑ Issues in supply chain emissions accounting</p>	<ul style="list-style-type: none"> • Data collection from relevant companies outside our Group, and from abroad
<p>❑ Other remarks</p>	<ul style="list-style-type: none"> • Our accounting results have received third party review for verification.
