## **DAIKEN** Corporation

		Companies' approach	
1	Background and purpose of accounting	<ul> <li>To drive more effective reduction activities by getting a full picture of the GHG emissions from the entire supply chain, and thereby visualizing the relationship between our group companies and global warming.</li> <li>To meet requests for information disclosure from stakeholders and also deepen their understanding of the commitment of our group companies.</li> </ul>	
2	Utilization of accounting results	<ul> <li>To identify reduction targets in the supply chain emissions and facilitate emissions reduction.</li> <li>To post the accounting results on our website and disclose information to stakeholders.</li> <li>To utilize the accounting results for responses to various verifications including CDP.</li> </ul>	
3	Benefits of accounting	<ul> <li>Understanding processes with significant emission in the entire supply chain enables us to identify challenges our group companies need to address and targets relevant to reduction activities.</li> </ul>	
4	Internal system for accounting	<ul> <li>Data is collected through relevant departments of our group companies, and the IR and ESG section of the Corporate Communication Department performs accounting.</li> </ul>

### **DAIKEN** Corporation

		Companies' approach		
5	Efforts to reduce supply chain emissions	<ul> <li>Procurement of raw materials and outsourced products contributes to significant emissions. We, therefore, need to promote resource saving and weight reduction of products by research and development. etc. and reduce the entire emissions including transportation and delivery.</li> </ul>		
6	Issues in supply chain emissions accounting	<ul> <li>This accounting covers DAIKEN Corporation and domestic group companies based in Japan. We need to include overseas group companies in accounting, and clearly identify the emission reduction targets in the future.</li> <li>It is difficult to reflect the evaluation of achievement of our commitment through accounting with the existing emission factor.</li> <li>We need to reduce the workload by efficient data aggregation.</li> </ul>
