Ito-Yokado Co., Ltd.

	Companies' approach
<p>⑤ Efforts to reduce supply chain emissions</p>	<ul style="list-style-type: none"> • We have implemented various actions to lower environmental burden from our operation by introducing LED lighting, PV and wind power generation, ice thermal storages that utilize night-time power, high-efficient air conditioners, etc. Besides facilities, we started charging for plastic bags on the food floors, which took a lead in the retail industry. • Scope 3 accounting for this time clarified a different aspect of our emissions. • From value chain perspective, the largest portion of CO2 emissions comes from Category 1, which we recognize as the crucial area we should address. • For reducing CO2 emissions from Category 1, it is important to incorporate energy point of view at purchasing stage, besides price, quality or marketing viewpoints. • By improving efficiency in energy use, we can reduce both environmental impacts and cost.
<p>⑥ Issues in supply chain emissions accounting</p>	<ul style="list-style-type: none"> • For some categories, we had to perform conversions from price, which doesn't necessarily reflect effects from actual emission reductions, especially for those from actions evaluated over time. • If there is no option to analyze emissions based on intensity, it is disadvantageous for growing companies because absolute emissions will be increased in this accounting.
<p>⑦ Other</p>	<ul style="list-style-type: none"> • Various issues remain on one hand, though, this accounting clearly points out which areas we should address in the major emission sources. • It is quite useful to understand a degree of impacts from our entire value chain over the society. It also makes us easy to compare data with sector peer companies.

Ito-Yokado Co., Ltd.

Category	Accounting methods ※Accounting period : 4. 2018 -3.2019	
	Activity data	Emission factor
Category 1: Purchased goods and services	<ul style="list-style-type: none"> Cost of purchase by item 	<ul style="list-style-type: none"> Emission factor per amount *1
Category 2: Capital goods	<ul style="list-style-type: none"> Amount of capital investment 	<ul style="list-style-type: none"> Emission factor per capital goods*1
Category 3: Fuel and energy related activities not included in Scope 1 or 2	<ul style="list-style-type: none"> Energy consumption 	<ul style="list-style-type: none"> Emission factor per energy used *2
Category 4: Transportation and delivery (upstream)	<ul style="list-style-type: none"> Transportation weight x transportation distance 	<ul style="list-style-type: none"> Transport weight x Emission factor per distance
	<ul style="list-style-type: none"> Fuel consumption 	<ul style="list-style-type: none"> Emission factor per fuel used *3
Category 5: Waste generated in operations	<ul style="list-style-type: none"> Waste generation by type of waste and method of disposal 	<ul style="list-style-type: none"> Emission factor by type of waste and method of disposal*1
Category 6: Business travel	<ul style="list-style-type: none"> Travel expense that the company owes (by transportation mode) 	<ul style="list-style-type: none"> Emission factor per travel expense *1
	<ul style="list-style-type: none"> Total business travel days 	<ul style="list-style-type: none"> Emission factor per total business travel days Average of all the business travels
Category 7: Employee commuting	<ul style="list-style-type: none"> Commutation cost that the company owes (by transportation mode) 	<ul style="list-style-type: none"> Emission factor per commutation expense *1
Category 8: Leased assets (upstream)	<ul style="list-style-type: none"> No corresponding activities (because these are included in Scope 1 and 2) 	
Category 9: Transportation and delivery (downstream)	<ul style="list-style-type: none"> Transportation weight x transportation distance 	<ul style="list-style-type: none"> Transport weight x Emission factor per distance
	<ul style="list-style-type: none"> Fuel consumption 	<ul style="list-style-type: none"> Emission factor per fuel used
	<ul style="list-style-type: none"> Transportation amount 	<ul style="list-style-type: none"> Emission factor per amount *1
Category 10: Processing of sold products	<ul style="list-style-type: none"> No corresponding activities (No product can be considered relevant) 	
Category 11: Use of sold products	<ul style="list-style-type: none"> Number of cleanings for garment 	<ul style="list-style-type: none"> Emission factor per weight for a washing *4
Category 12: End-of-life treatment of sold products	<ul style="list-style-type: none"> Waste generation 	<ul style="list-style-type: none"> Emission factor per waste generation *1
Category 13: Leased assets (downstream)	<ul style="list-style-type: none"> Type and area of tenants 	<ul style="list-style-type: none"> Emission factor per unit area by application of building *1
Category 14: Franchises	<ul style="list-style-type: none"> No corresponding activities 	
Category 15: Investments	<ul style="list-style-type: none"> Not applicable (because Category 15 is set up as a category for private financial institutions) 	
Other	<ul style="list-style-type: none"> Not calculated
