

Project for Promoting a Low-carbon Hydrogen Society

- ❑ Hydrogen is expected to contribute to prevent global warming and assure energy security.
- ❑ However, it is not necessarily reducing CO₂ emissions when it comes to whole supply chain. For example, when hydrogen is produced from fossil fuels, CO₂ is emitted.
- ❑ To reduce CO₂ emissions and realize a low-carbon society, it is important to develop low-carbon supply chain as a whole and evaluate CO₂ reduction through the entire process.

- ❑ Establish a method to evaluate CO₂ reduction through the whole supply chain.
- ❑ By collaborating with local governments, establish a low-carbon hydrogen supply chain and demonstrate advanced low-carbon hydrogen technologies.
