

Current Practice of recycling and treatment of hazardous waste from ESM perspective in Asia - ICT Manufacturers

Monina De Vera
Member of ICT Group
19th Nov 2012

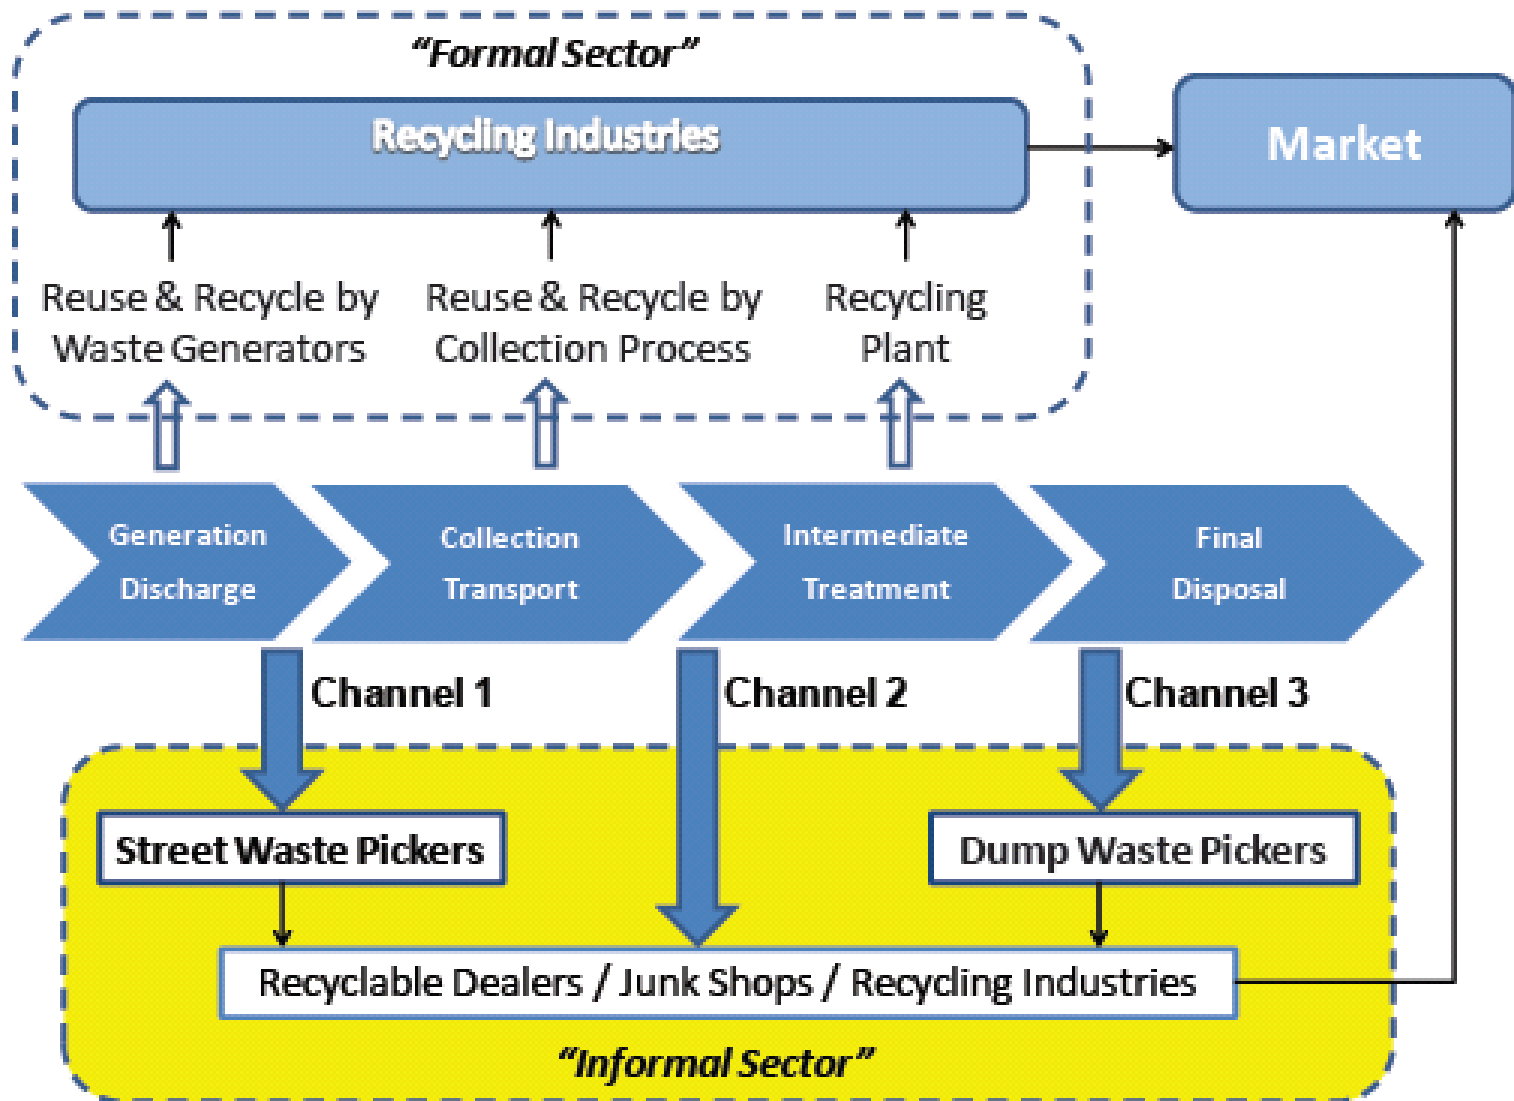

Content

- Introduction of ICT group
- E-Waste Flow
- General Recycling Process of ICT products
- Example of Downstream Materials Flow and How is it recycled
- Recyclers Management Practice by Manufacturers
- Recycler ESM Practice

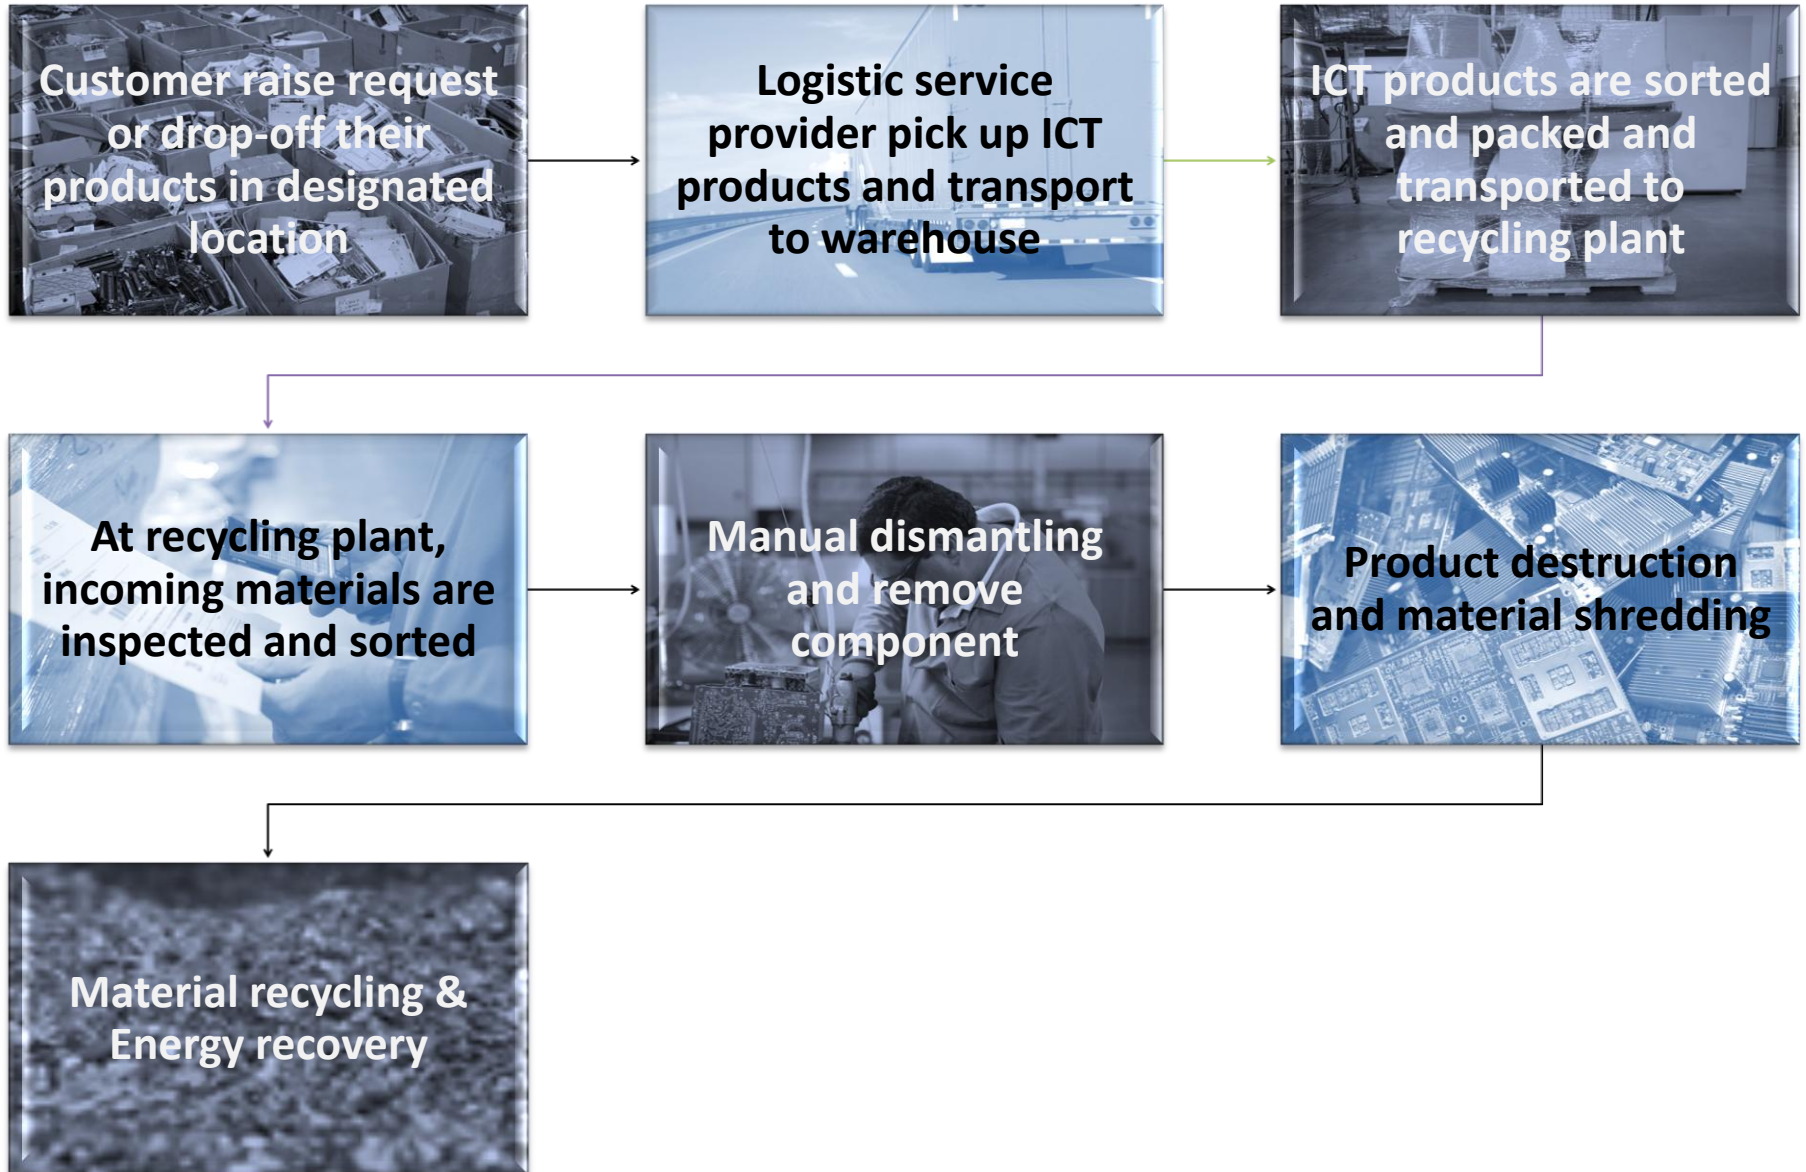

Background of ICT Group

- A group of Infocomm Technology (ICT) and Consumer Electronics (CE) companies formed in 2008 to discuss environmental topics
- At present, the group has 13 members from major global companies
- Voluntary participation
- Regional coverage
- Commonly on Southeast Asia with some company representatives covering other countries of Asia & Australasia

Recyclers Management Practice by Manufacturers (Page 1 of 2)

1. Recycling Standards. This standard defines the requirements for vendors who recycle or dispose of e-waste or materials.

Standards include:

- Code of Conduct and Ethical Business Practices
- Guidelines on reuse and recycling
- Landfill avoidance
- Insurance
- Use of sub-vendors
- Audit of vendors and documentation
- Processing requirements
- Product and materials tracking and accountability
- Transboundary shipment
- Information security
- Site security
- Approved dispositions

Recyclers Management Practice by Manufacturers (Page 1 of 2)

2. Yearly On-Site Audit of Vendors/Every 3 year period for subvendors
 - Facility Audit
 - Desk Audit
 - Materials Audit
 - Process Audit
 - Security Audit
3. Require ISO 9K, 14K and (preferred vendor with) R2 certification

ESM Practice of Recycler

1. Generally, for the classification of the e-waste, recycler will consult the exporting country's Competent Authority (CA). The other option for the classification of the e-waste is from the Basel Convention Website.
2. Follows detailed description of the control procedure of the Basel Convention on Transboundary Movement of Hazardous Wastes and their Disposal.
3. Follows detailed requirement of country's regulation in transportation, storage and recycling of Hazardous Waste and their Disposal.
4. Develop new technologies to improve current recycling and treatment of materials.

In Summary

1. Manufacturers set standards, policies and guidelines on management of e-waste.
2. Manufacturers work with recyclers to build capacity and capability to recycle it's products in country.
3. Manufacturers are supporting any means to restrict illegal exports/imports of e-waste. However, measures/controls established should not stop legitimate repair practices in centralized repair centers.
