Direct line: 03-5521-8316
Switchboard: 03-3581-3351
Director: Masanobu Miyazaki (ext. 6610)
Deputy Director: Saori Nagasawa (ext. 6614)
Coordinator: Katsuhiko Sato (ext. 6628)

In accordance with the Comprehensive Radiation Monitoring Plan determined by the Monitoring Coordination Meeting, the Ministry of the Environment (MOE) is continuing radioactive materials monitoring in surface water and its sediment (rivers, lakes and headwaters, and coasts).

Samples of aquatic organisms taken mainly in Fukushima Prefecture (winter survey: sampling period: December 4, 2012-January 18, 2013) have been measured as part of MOE's efforts to monitor radioactive materials; the results have been compiled and are released here.

The monitoring results of radioactive materials in surface water bodies carried out to date can be found at the following web page: <http://www.env.go.jp/jishin/rmp.html#monitoring>

1. Survey Overview

(1) Survey Locations

Type	Surveyed Areas		Survey Locations, etc.	Survey Date
Rivers	A	Abukumagawa River	Harasegawa River (Tributary)	December 5, 2012
	B		Surikamigawa River (Tributary), Taishobashi Bridge	December 6, 14, 2012
	C	Udagawa River		December 18, 2012
	D	Manogawa River		December 12, 13, 2012, January 18, 2013
	E	Niidagawa River		December 19, 2012
	F	Otagawa River		December 20, 2012
Lakes	G	Hayamako lake (Mano Dam)		December 10, 2012, January 18, 2013
	H	Akimoto Lake		December 4, 2012
	I	Inawashiroko Lake	South Shore	December 7, 2012
Sea Areas	J	Offshore of Abukumagawa River Estuary		December 11, 2012
	K	Offshore of Somashi City (Matsukawaura Lake)		December 10, 2012
	L	Offshore of Iwakishi City (Hisanozama Beach Offshore)		December 14, 24, 2012

(Map attached)

(2) Survey Method

Samples of aquatic organisms (aquatic insects, algae, crustaceans, shellfish, fishes, etc.) were collected and the concentration of radioactive materials (radioactive cesium (Cs-134 and Cs-137)) in each type of organisms was measured.

2. Survey Results Summary (See Annex for details)

(1) Rivers and Lakes (lower row in each case shows the results of 2012 fall surveys)

There are variations between each body of water and the types of organism collected, but in general, a decline in the concentrations of radioactive cesium can be seen compared to the fall survey. Furthermore, just as in previous surveys, the concentration of radioactive cesium in rivers and lakes is higher than in sea areas.

*As for monitored specimen, including fish, the entire organism is used.

Starting with the 2012 fall survey, the following 4 species (categorized by feeding habit and type) of aquatic insects have been sampled and analyzed.

- Odonata (Dragonfly larva, carnivore)
- Corydalidae (carnivore)
- Perlidae (carnivore)
- Stenopsyche (omnivorous, detritivorous)

(2) Sea Areas (lower row in each case shows the results of 2012 fall surveys)

There are variations between each body of water and the type of organism collected, but in general, the levels of radioactive cesium are about the same as those seen in the fall survey. Furthermore, just as in previous surveys, the concentrations of radioactive cesium in sea areas are lower than in rivers and lakes.

3. Future Plans

MOE will continue to measure the concentration of radioactive materials in aquatic organisms in 2013 (organisms collection conducted 3-4 times each year).
