

Results of Radioactive Material Monitoring at Bathing Areas (April-July, 2014)

Friday, July 25, 2014
Water Environment Division,
Environmental Management Bureau
Ministry of the Environment
Direct line: 03-5521-8316
Switchboard: 03-3581-3351
Director: Takashi Omura (ext. 6610)
Coordinator: Saori Nagasawa (ext. 6614)

Each local authority conducted radioactive material monitoring at bathing areas this summer. The Ministry of the Environment compiled the results reported from each prefecture and here announces that there were no reports of radioactive materials in excess of the reference values for water at bathing areas having been detected.

1. Survey Overview

Number of locations: Surveys conducted at 422 bathing areas, etc. in 25 prefectures

Survey items: Activity concentrations (radioactive iodine and radioactive cesium) in water at bathing areas
Ambient dose rates at beach bathing areas

Survey period: Early April to early July

2. Outline of Results

- There were no reports of radioactive materials in excess of the reference values^(*) for water at bathing areas having been detected (see the Annex for details).

* Reference value for radioactive materials in water at bathing areas
Total for Cs-134 + Cs-137: 10 Bq/L

- It was reported that ambient dose rates at beaches were about the same as or less than those in surrounding areas.

The compiled results are available at http://www.env.go.jp/jishin/monitoring/results_r-ba.html.
For details of the survey results for individual bathing areas, please contact the local authority, etc. where the bathing area in question is located.

Results of FY2014 Radioactive Material Monitoring of Water at Bathing Area
