

## (News Release)

# The Results of Radioactive Material Monitoring of the Surface Water Bodies within Iwate Prefecture (July-August Samples)

Friday, October 11, 2013  
Water Environment Division,  
Environment Management Bureau,  
Ministry of the Environment  
Direct line: 03-5521-8316  
Switchboard: 03-3581-3351  
Director: Masanobu Miyazaki (ext. 6610)  
Deputy Director: Saori Nagasawa (ext. 6614)  
Coordinator: Katsuhiko Sato (ext. 6628)

In accordance with the Comprehensive Radiation Monitoring Plan determined by the Monitoring Coordination Meeting, the Ministry of the Environment (MOE) is continuing to monitor radioactive materials in water environments (surface water bodies (rivers, lakes and headwaters, and coasts), etc.).

Samples taken from the surface water bodies of Iwate Prefecture during the period of July 19-August 29, 2013 have been measured as part of MOE's efforts to monitor radioactive materials; the results have recently been compiled and are released here.

The monitoring results of radioactive materials in surface water bodies carried out to date can be found at the following web page: <http://www.env.go.jp/jishin/rmp.html#monitoring>

### 1. Survey Overview

#### (1) Survey Locations

20 environmental reference points, etc. in the surface water bodies within Iwate Prefecture  
(Rivers: 18 locations, Coasts: 2 locations)

#### (2) Survey Method

- Measurement of concentrations of radioactive materials (radioactive cesium (Cs-134 and Cs-137)) in water and sediment
- Measurement of concentrations of radioactive materials and spatial dose-rate in soil in the surrounding environment of water and sediment sample collection points (river terraces, etc.)

### 2. Outline of Results (\* and \*\* denote the results of the previous surveys (\*May-June 2013, \*\*February-March 2013))

#### (1) Water Quality (Lower detection limit: 1Bq/L)

Cs-134 + Cs-137: Not detectable (ND) at any location (\* ND at any location)

#### <Reference>

Specification and Standards for Food, Food Additives, etc. in accordance with the Food Sanitation Act (Drinking Water) (Ministry of Health, Labour and Welfare Public Notice No.130, March 15, 2012)  
Radioactive cesium (total for Cs-134+Cs-137): 10Bq/kg

Target value for radioactive materials in tap water (management target for water supply facilities) (March 5, 2012; 0305 Notice No.1 from the Director of the Water Supply Division, Health Service Bureau, Ministry of Health, Labour and Welfare)

Radioactive cesium (total for Cs-134+Cs-137): 10Bq/kg

#### (2) Sediment (Lower detection limit: 10Bq/kg (dried mud))

Overall, the levels were around 500Bq/kg or below at all locations and had a declining tendency at

almost all locations.

(Rivers)

Cs-134 + Cs-137: ND-101Bq/kg (dried mud) (\*ND-340Bq/kg (dried mud))

(Coasts)

Cs-134 + Cs-137: ND-46Bq/kg (dried mud) (\*\* ND-39Bq/kg (dried mud))

<Reference> Number of locations by radioactive cesium concentration (500Bq/kg)

Numbers in ( ) denote results measured on the previous occasion.

	500 or below	501 -1,000	1,001 -1,500	1,501 -2,000	2,001 -2,500	2,501 -3,000	3,001 or more	Total
Rivers	18 (22)	0 (0)	1 (0)	0 (0)	0 (0)	0 (0)	0 (0)	18 (22)
Coasts	2 (2)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)	0 (0)	2 (2)

(3) Surrounding Environment (Lower detection limit: 10Bq/kg (dry))

(Rivers)

Cs-134 + Cs-137: 115-2,670Bq/kg (dry) (\*88-4,100Bq/kg (dry))

Spatial dose: 0.06-0.18 $\mu$ Sv/h

(Annex for details)  
(Map attached)

Future Plans

MOE intends to continue to measure radioactive materials in water, sediment, etc. in rivers, lakes, etc. since concentrations of radioactive materials seem to show fluctuations, depending on locations, due to minor differences in sampling points or properties of samples of each survey.

## ORiver: Water Quality Monitoring Results

(Annex)

No.	Sampling point			Sampling date	Weather	Full depth (m)	General items					Radioactive material concentrations (Bq/L)		Remarks				
	Water body	Point	Municipality				Sampling depth (m)	Transparency (cm)	Electrical conductivity (mS/m)	SS (mg/L)	Turbidity	Radioactive cesium

• Samples for surrounding environment (soil) were generally collected from 5 points in 3m square in the river terrace, etc., and mixed. Depending on the site situation, factors, such as the area of sampling may be much smaller, may cause figures to vary significantly.

• Sampling points for rivers are listed from north to south, and for different points along the river, from upstream to downstream.

• Air dose was measured with a survey meter, TCS-172B of Hitachi-Aloka Medical, Ltd.

• Radioactive materials concentrations contain some measurement errors but are not noted here.

## OCoast: Water Quality Monitoring Results

Sampling point				Sampling date	Weather	Full depth (m)	General items					Radioactive material concentrations (Bq/L)		Remarks				
No.	Water body						Sampling depth (m)	Secchi disk depth (m)	Salinity (%)	SS (mg/L)	Turbidity	Radioactive cesium						
	Surface layer	Lower layer	Surface layer									Cs-134	Cs-137					
1	Ofunatowan Bay (A)	S-31	Surface layer	2013/7/19	Cloudy	16.3	0.5	3.1	17	3	2	<1	<1					
			Lower layer				15.3		29	2	1	<1	<1					
2	Hirotawan Bay	S-34	Surface layer	2013/7/19	Cloudy	11.2	0.5	1.8	17	6	4	<1	<1					
			Lower layer				10.2		29	2	1	<1	<1					

• Sampling points are listed from north to south.

## OCoast: Sediment Monitoring Results

Sampling point				Sampling date	Weather	Full depth (m)	General items		Concentration of radioactive material [Bq/kg (dried mud)]			Remarks				
No.	Water body						Mud content %	Property	Radioactive cesium							
	Cs-134	Cs-137	Total						Cs-134	Cs-137	Total					
1	Ofunatowan Bay (A)	S-31	2013/7/19	Cloudy	16.3	42	Silt	15	31	46	-					
2	Hirotawan Bay	S-34	2013/7/19	Cloudy	11.2	75	Sand/silt	<10	<10	-	-					

• Sampling points are listed from north to south.

• Radioactive materials concentrations contain some measurement errors but are not noted here.
