

Marine Biodiversity Conservation Strategy

March 2011

Ministry of the Environment

Outline of the Marine Biodiversity Conservation Strategy in Japan	2
Preamble	4
 Chapter 1 Background	5
 Chapter 2 Objectives	7
 Chapter 3 Biodiversity in the ocean and its ecosystem service	
1. What are the biodiversity and the ecosystem service?	8
2. Functions of the ocean and characteristics of its ecosystems	8
(1) Physical functions and blessings from the ocean	8
(2) Characteristics of marine ecosystems	9
(3) Characteristics of the marine environment and ecosystems around Japan	9
3. The current status of marine biodiversity	10
(1) Global marine biodiversity outlook	10
(2) Status of the marine biodiversity in Japan	11
4. Impacts of human activities on marine biodiversity	12
(1) Factors affecting marine biodiversity	12
1) Physical alterations to reduce habitats for organisms	12
2) Pollution of the marine environment that deteriorates the quality of ecosystems	12
i . Pollution from land-based sources and activities	
ii . Pollution from marine based sources and activities	
3) Fishery-related problems	13
4) Disturbance of ecosystems by alien species	13
5) Effect of the climate change	13
(2) Impact factors in each type of water	14
1) Coastal water subject to significant impacts by human activities	14
2) Human pressure on the open ocean	15
 Chapter 4 Basic perspectives on conservation and sustainable use of marine biodiversity	
1. Recognition of the importance of marine biodiversity	16
2. Integrated management of the sea	16
(1) Importance of its integration with land in coastal areas	16
(2) Importance of extensive perspectives on open ocean	17
3. Measures appropriate to the characteristics of marine areas around Japan	17
4. Effective measures to utilize local knowledge and technology	22
5. Summary of the concept of Marine Protected Areas	22
(1) Defining Marine Protected Areas	22
(2) Current status of Marine Protected Areas in Japan and their challenges	23
 Chapter 5 Development of measures for conservation and sustainable use of marine biodiversity	
1. Improvement of baseline information	25
(1) Improvement of scientific information and knowledge	25
(2) Identification of marine areas of particular importance for conservating biodiversity	27
2. Identification of factors influencing marine biodiversity and implementation of measures to reduce them	27
(1) Balanced development and conservation of the sea	27
(2) Reducing marine environment pollutants that degrade quality of ecosystems	28
1) Pollution from land-based sources and activities	28
2) Pollution from marine based sources and activities	28
(3) Appropriate management of fishery resources	28
(4) Eradication and control of alien species that trigger disturbance of ecosystems	29
(5) Countermeasures and adaption against climate change	29
3. Implementation of measures appropriate for characteristics of individual marine areas	30
(1) Coastal area	30
(2) Open ocean	31
4. Improvement of Marine Protected Areas and enhancement of their networking	31
(1) Promotion of establishment and enhancement of management	32
(2) Enhancement of networking	33
5. Facilitation of public acceptance and involvement of various actors	33
Closing remarks	35
Marine Biodiversity Conservation Strategy Attachment	37
