

# WWF-US:バーチャル ハウス

WWF VIRTUAL HOUSE

Can you find a simple way to keep toxic chemicals out of your house . . . hotter . . . hotter . . . (The correct object is the kitchen.)

Many people don't know that they can greatly reduce the amount of toxic chemicals in their homes by keeping plastic wrap away from foods in the microwave. Plastic wrap can cause chemicals known as "endocrine disruptors" to leach into foods. If you must use plastic wrap and plastic containers and into any foods that are not microwave safe, you should cover your food with wax paper or a piece of parchment paper--and put it into a heat-resistant glass or ceramic container--and heat things up in the microwave.
