\*1: Organisms were collected in or around the targeted water areas.

<sup>\*2:</sup> When multiple types of aquatic organisms were collected, a sample was prepared by mixing them.

 $<sup>{\</sup>bf *3:} For a sample made of multiple types of aquatic organisms, the English name of the dominant one largest in number is underlined.$ 

<sup>\*4:</sup> Basically, measurement was conducted for all organism samples. Viscera (stomach and bowels) were removed for the measurement when possible so that undigested food and sediments, etc. in the digestive system would be excluded.

 $<sup>*5:</sup> Plankton \ (suspended \ algae) \ is \ the \ residue \ remaining \ after \ the \ filtration \ of \ lake \ water \ or \ seawater \ with \ a \ plankton \ net \ (40\mu m-mesh).$ 

<sup>\*6:</sup> River bottom materials (incl. algae) are algae, etc. that were scratched off stones with a brush, etc. and may include very fine particles such as inorganic silt and

<sup>\*7:</sup> N.D. means to be below the detection limit and figures in parentheses show the detection limit.

<sup>\*8</sup>: Activity concentrations include counting errors, but the details are omitted here.
