Atlas of Ocean Microplastics

Atlas for Ocean Microplastics AOMI: 青海 Blue Ocean

- Aims to establish a global network hub for **sharing and compiling monitoring data** on ocean surface microplastics in collaboration with existing and future initiatives.
- Generates **added value** through **data harmonization**.
- Benefit **policymakers, researchers, and the general public** not only from the collected information but also from comparable data and user-friendly maps

International Workshop on Marine Debris Data Harmonization

Draft **metadata** and a **data requirements** sheet (experts, MOEJ, EMODnet, NOAA)

Recommendations for the **UNEP GPML** Digital Platform data matrix.

Roadmap towards a **federated data management system** for **ocean surface microplastics** and selected global-scale marine debris indicators

<https://geoblueplanet.org/international-marine-debris-data-harmonization-workshop/>

Required Metadata for ocean surface microplastic

Excel file for data submission:

- 1.Data set info
- 2.Field survey
- 3.Laboratory analysis
- 4.Results
- 5.Remarks

Submit **before**,
simultaneously or **after**
paper publication

	Item ID	Description of data item	Example	Category	Data entry field	
					All samples	Each samples
	0012	Name of voyage when the sample was taken.	Japanese off-shore			
	0053	Name of vessel used for sample collection.	Kiraku-maru			
	0055	Code of vessel used to collect the sample: either the vessel's registration number or the vessel's code.	XXXXXX			
t	0056	Name of instrument used to collect the sample, including the name of the net.	Neuston net	E		
	0058	Model of instrument used to collect the sample.	JMA Neuston net, No.5552			
	0060	Shape of sample collection port.	Rectangular	E		
	0062	Width of the sampling port, in meters.	0.75	FC / E		
	0064	Height of sampling port, in meters. If the top of the sampling port is not rectangular, indicate the shape.	0.75	E		
	0066	Height of sampling port, in meters. If the shape of the sampling port is not rectangular, indicate the shape.	0.5625	E		
	0068	Length from the opening of the net to the very end of the net. If the net is not rectangular, indicate the shape.	3	E		
	0070	Length of the open part of each stitch in the net. This does not include the length of the mesh eye opening.	0.35	E		
	0072	Whether the length of the mesh eye opening (#0070) is the length of the mesh eye opening.	One side	E		
	0074	Net model number, standard, etc.	net fabric nip			
ion	0094	Location of sampling device relative to the research vessel. The location should be described in terms of distance and direction.	Side	E		
	0096	Distance of sampling device from the research vessel, in meters.	3	E		
	0029	Name of sample taken for monitoring, or its ID.	Towing No.99			
	0031	Time difference from GMT (Greenwich Mean Time) of the time of sample collection.	The above times - 9 h = GMT	E		
	0033	Start date of sample collection.	2018-09-19	FA / E		
	0035	Date of completion of sample collection.	2018-09-19	E		
	0037	Start time of sample collection. (24 hour notation)	3:00:00 PM	E		
	0039	End time of sample collection. (24 hour notation)	3:20:00 PM	E		
	0041	Season in which the sample was taken.	Summer	E		
	0043	Name of water body from which the sample was taken.	Toyama Bay	E		
	0045	Latitudinal coordinates at the start of the sample collection, with positive or negative sign.	39.76722222	FA / E		
	0047	Longitude coordinates at the start of the sample collection, with positive or negative sign.	8.043611111	FA / E		
	0049	Latitudinal coordinates at the end of the sampling, with positive or negative sign.	39.75638889	E		
	0051	Longitude coordinates at the end of the sample collection, with positive or negative sign.	8.043055556	E

Fundamental minimum requirements to identify the **abundance** of microplastics, sampling **time and location**, and microplastic **density** (particles/m³ or km² and weight/m³ or km²)

Essential minimum requirements to make the survey results **comparable**.

Optional (no color) data items obtained optionally (specific purpose or instrument availability).

Data management

Table 2 Outline of QC grades.

QC Grade	Description of QC Grade
1	Data received (no quality control)
2	Data with codes for quality control
3	Data include "fundamental data items"
4	Data include all "essential data items"
5	Harmonized data*

Table 3 Outline of processed data.

Processed Level 1	Calibration by removal of fibrous microplastics (particles/m ³)
Processed Level 2	Processing for wind/wave correction (particles/km ²) and conversion from particle count to weight (g/km ²)
Processed Level 3	Data gridded using an optimum interpolation method (OEM) (particles/km ² , g/km ²)

Data selection ✕

By default, all records of data stored in the database are displayed. However, when Quality Control identifies a problem of inconsistency between data items (QC code 1-3 is added), such a record would not be displayed.

Data processing and data quality ⬆

Processing level: ☒ 0(Original) ☐ 1 ☐ 2(low-weight estimation) ☐ 2(high-weight estimation) ☐ 3(high-weight estimation)

Quality Control Grade: ☐ 2 ☐ 3 ☐ 4 ☐ 5

Measuring progress..

More than 13000 values...

...but significant data gaps:

- Indian Ocean
- South China Sea
- South Atlantic
- South Pacific

Goals for AOMI database promotion activities:

1. increase *awareness and engagement* among diverse stakeholders
2. highlight key features and advantages
3. simplify and encourage the submission and data download processes

Thank you for your attention
