Challenge for 21st Century Risk Assessment

リスク評価 21世紀の課題

Looking back, looking forwards ...

- Legacy contaminants

- heavy metals
- organochlorine pesticides
- polychlorinated biphenyls
- polycyclic aromatic hydrocarbons

5

- Emerging contaminants

 - endocrine disrupters
 - flame retardants
 - personal care products
 - pharmaceuticals
 - plastics

Cefas

過去を振り返り、将来を見つめる ...

- 負の遺産としての汚染物質

- 重金属
- 有機塩素系農薬
- PCB
- 多環芳香族炭化水素

7

- 新たな汚染物質

 - 内分泌かく乱化学物質
 - 難燃剤
 - パーソナルケア製品
 - 医薬品
 - プラスチック可塑剤

Key EU Policy Drivers

Activity	Regulatory Driver
Agriculture	Plant Protection Products Directive 1107/2009/EC
Aquaculture	Veterinary Medicines Directive 2001/82/EC
Biofouling	Biocidal Products Directive 98/8/EC
Corrosion control	Biocidal products Directive 98/8/EC
Industrial chemicals	REACH Directive EC1907/2006
Marine ecosystems	Marine Strategy Framework Directive 2008/56/EC
Nanomaterials	REACH Directive EC1907/2006
Offshore gas & oil	OSPAR Harmonized Mandatory Control System
Pharmaceuticals (humans)	Medicinal Products for Human Use Dir 2001/83/EC
Pharmaceuticals (veterinary)	Veterinary Medicines Directive 2001/82/EC
Water quality	Water Framework Directive 2000/60/EC

6 Further information: http://ec.europa.eu/environment/index_en.htm**Cefas**

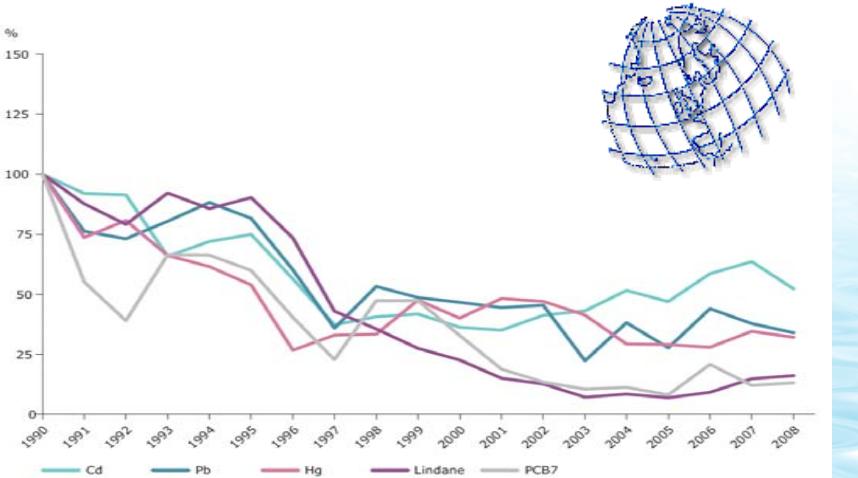

EUにおける主な環境政策

対照	政策の根拠となる法令等
農業	Plant Protection Products Directive 1107/2009/EC
水産業	Veterinary Medicines Directive 2001/82/EC
生物汚損	Biocidal Products Directive 98/8/EC
腐食防止	Biocidal products Directive 98/8/EC
工業化学品	REACH Directive EC1907/2006
海洋生態系	Marine Strategy Framework Directive 2008/56/EC
ナノマテリアル	REACH Directive EC1907/2006
沿岸ガス・石油	OSPAR Harmonized Mandatory Control System
医薬品(人)	Medicinal Products for Human Use Dir 2001/83/EC
医薬品(家畜)	Veterinary Medicines Directive 2001/82/EC
水質	Water Framework Directive 2000/60/EC

Cefas

Case study: 17 α -ethinylestradiol

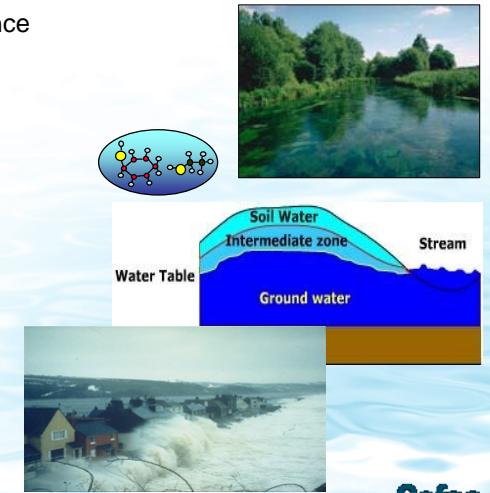

Level 1 Sorting & prioritization based on existing information	- molecular weight = 296.44 log Kow = 3.67 water solubility 4.8 mg/L - pharmaceutical mode of action targets oestrogen receptor (ER) - widespread use, persistent, diffuse release via sewage effluents	
Level 2 <i>In vitro</i> assays providing mechanistic data	- positive in wide range of yeast & mammalian <i>in vitro</i> assays - positive inducer of vitellogenin in amphibian and fish hepatocytes - inactive in the insect ecdysteroid assay (BII assay)	
Level 3 <i>In vivo</i> assays providing data about single mechanisms & effects	- positive in rodent Uterotrophic assay - negative in rodent Hershberger assay - positive inducer of vitellogenin (VTG) and related biomarkers in amphibians, birds and fish	
Level 4 <i>In vivo</i> assays providing data about multiple mechanisms & effects	- positive in rodent TG407 enhanced to assess endocrine mechanisms) - positive on rodent TG 408 90d study - positive in range of fish studies using molecular biomarkers anchored into phenotypic observations (eg VTG, kidney pathology, etc)	
Level 5 <i>In vivo</i> assays providing data on effects from endocrine & other mechanisms	- Large database of studies in aquatic animals - fish full lifecycle NOEC = 1 ng/L - chronic LOEC low ng/L range - lake study effects at 5 ng/L	Risk assessment conclusions: PNEC freshwater = 0.35 ng / L PNEC marine = 0.035 ng / L

Water Framework Directive: Retrospective Risk Assessment

- Prevent deterioration and enhance status of aquatic ecosystems & associated wetlands
- Promote sustainable water use
- Reduce pollution from priority substances
- Prevent deterioration/reduce pollution of groundwater
- Contribute to mitigating effects of floods/droughts

30

Water Framework Directive Pollutants

33

EQS values for saltwater & freshwater ecosystems

- Separate EQSs for saltwater and freshwater ecosystems

- Additional assessment factor of 10 applied when estimating saltwater EQS (assumes more biodiversity) unless exclusively marine taxa represented in dataset

- Saltwater EQS values are usually more stringent (lower) than freshwater EQS values

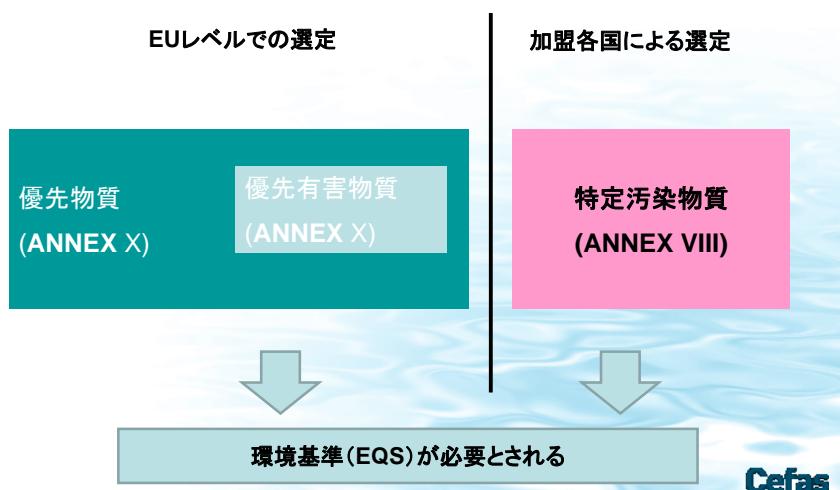

Adopt saltwater EQS for transition waters (>5 ppt salinity)

Credit: Paul Whitehouse, Environment Agency

Cefas

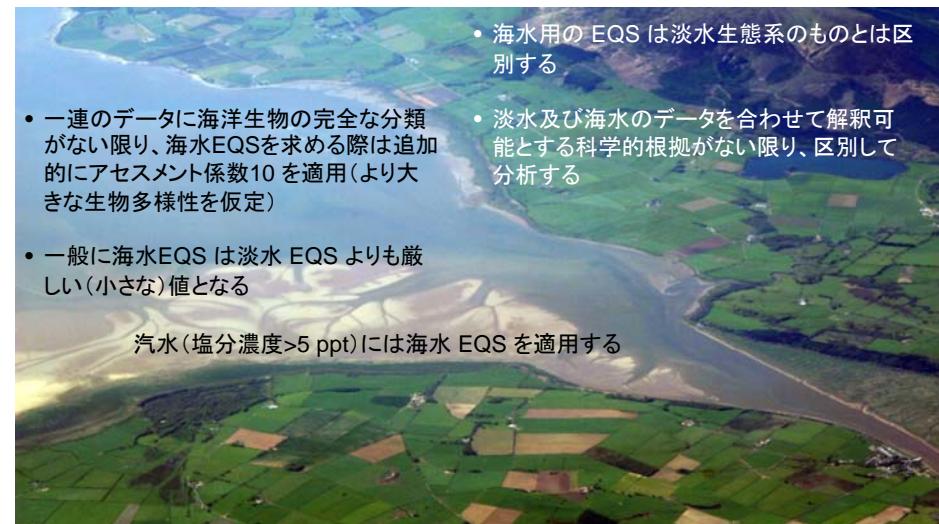

34

Water Framework Directive(水枠組み指令) における汚染物質

35

海水及び淡水生態系におけるEQS 値

- 海水用の EQS は淡水生態系のものとは区別する

- 一連のデータに海洋生物の完全な分類がない限り、海水EQSを求める際は追加的にアセスメント係数10を適用(より大きな生物多様性を仮定)

- 一般に海水EQSは淡水EQSよりも厳しい(小さな)値となる

汽水(塩分濃度>5 ppt)には海水 EQS を適用する

EST 32: 1549-1558

Cefas

48

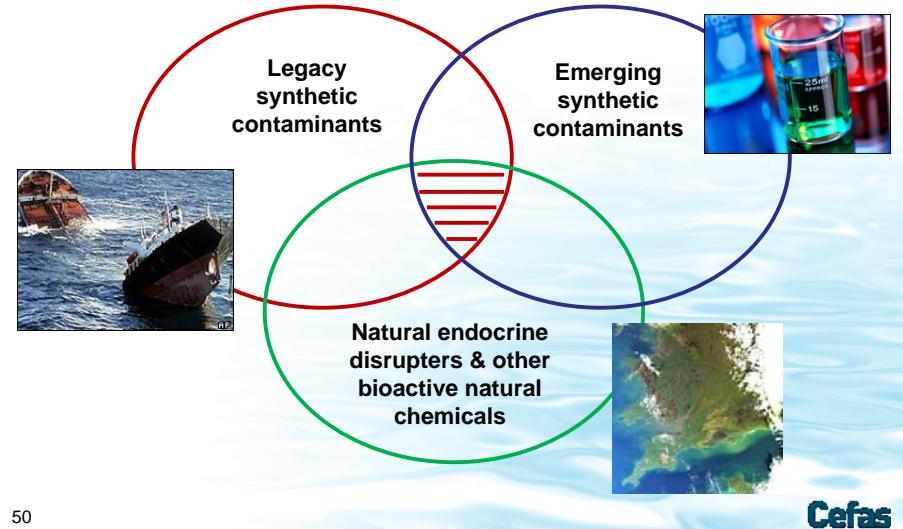

Retrospective approach (2): Biological effects monitoring

- Environmental monitoring is a valuable tool for environmental risk assessment (ERA) and environmental impact assessment (EIA).
 - Field collection environmental samples (from point source to ocean)
 - Biological effects monitoring
 - Compare biology data with quality assured chemical analysis

49

Prospective and retrospective risk assessment of chemicals

50

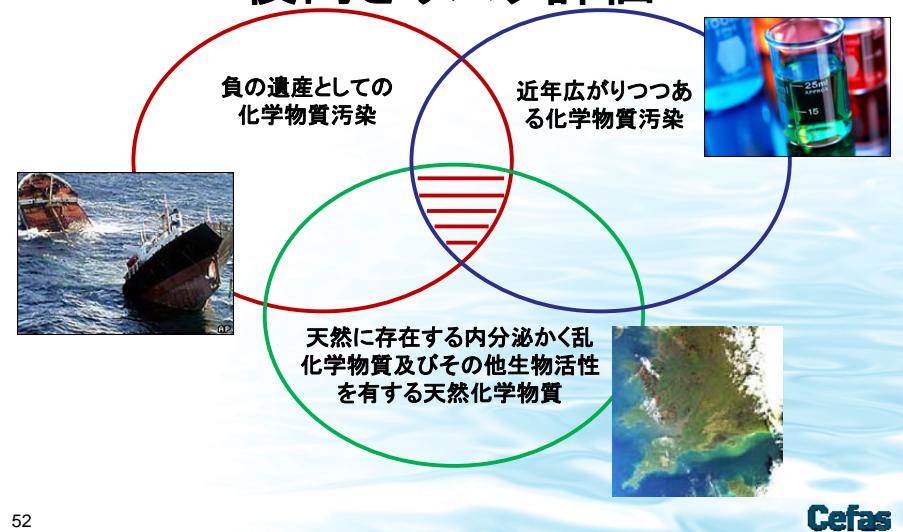

後向き検討(2)生物影響モニタリング

- 環境モニタリングは 環境リスク評価(ERA)及び環境影響評価(EIA)を実施する上で有用なツールである。
 - 環境試料の野外採取（点源から海洋まで）
 - 生物学的影響モニタリング
 - 生物学的データと品質保証された化学分析との比較

51

化学物質の前向き及び 後向きリスク評価

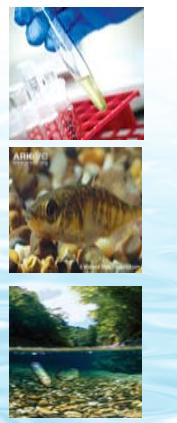

52

Future needs

1. Exposure assessment (chemicals & nanomaterials)
 - validated models a key tool
 - chemical monitoring in the environment
2. Hazard assessment
 - OECD test guidelines play key role
 - increasing use of predictive ecotoxicology
(Adverse Outcome Pathways supported by molecular and physiological data)
3. Risk assessment of mixtures
 - prospective risk assessment:
 - ▶ need validated models
 - retrospective risk assessment:
 - ▶ need whole effluent assessment & biological effects monitoring

53

今後の課題

1. ばく露評価 (化学物質及びナノ物質)
 - 重要なツールとなる検証モデル
 - 環境中の化学物質モニタリング
2. ハザード評価
 - 主要な役割を担うOECDテストガイドガイドライン
 - 使用場面が増える予測生態毒性学
(分子、生理学的データを根拠とする有害影響経路)
3. 混合物のリスク評価
 - 前向きリスク評価:
 - ▶ 検証モデルの必要性
 - 後向きリスク評価:
 - ▶ 原排水評価
 - 及び生物学的影響モニタリングの必要性
