Results of Radioactive Material Monitoring of Groundwater (September-October 2015)

1. Survey Overview

- (1) Period (sampling dates)
 - September 3 to October 1, 2015
- (2) Targets
 - Groundwater collected in Fukushima Prefecture (see the attached map)
- (3) Content

Measurement of activity concentrations in groundwater

2. Outline of Results

Measurement of Cs-134 and Cs-137 was conducted at all predetermined locations (205 locations), out of which at nine locations, measurement of Sr-89 and Sr-90 was also conducted. (Detection limit for all these measurements: 1 Bq/L)

None of these radionuclides were detectable at any of the locations surveyed.

<Notes>

• Specification and Standards for Food, Food Additives, etc. in Accordance with the Food Sanitation Act (Drinking Water) (Ministry of Health, Labour and Welfare Public Notice No.130, March 15, 2012) Radioactive cesium (total for Cs-134+Cs-137): 10 Bq/kg

•Reference Values for Radioactive Materials in Tap Water (Management Target for Water Supply Facilities) (March 5, 2012; 0305 Notice No.1 from the Director of the Water Supply Division, Health Service Bureau, Ministry of Health, Labour and Welfare)

Radioactive cesium (total for Cs-134+Cs-137): 10 Bq/kg

3. Future Plans

In and around Fukushima Prefecture, MOE intends to continue monitoring activity concentrations in groundwater, in coordination with the prefectural government, municipalities, and other relevant organizations.

<Inquiries> Office of Groundwater and Ground Environment, Soil Environment Division, Environmental Management Bureau, Ministry of the Environment Switchboard: 03-3581-3351 Direct line: 03-5521-8309 Coordinator: Takayuki Sato (ext. 6609)
