City-to-City Collaboration Project for the Realization of a Decarbonized Society in Hue, Vietnam

This project aims to contribute to the realization of a decarbonized society in Hue City by sharing Shizuoka City's expertise as a leading decarbonization region, including its environmental policies based on its global warming countermeasure plan, while fostering exchanges between private companies from both cities and promoting the establishment of a corporate platform.

This project also aims to contribute to the realization of a decarbonized society in Hue City by identifying potential projects eligible for JCM Model Projects and supporting their implementation through these activities.

Specific initiatives include promoting the introduction of renewable energy and energy-saving measures at public facilities, factories, and tourist sites in Hue City, as well as exploring CO₂ capture and utilization projects using fresh concrete sludge. The project also supports JCM project formation and the creation of carbon credits.
