

# City-to-City Collaboration Program Participants Tour Environmental Technology Facilities in Ehime Prefecture

## Overview

In the current fiscal year, the City-to-City Collaboration Program involves 10 countries and 47 cities, with 25 research projects currently underway. As part of the [City-to-City Collaboration Seminar 2026](#) held on February 5–6, approximately 120 stakeholders from all projects gathered in Ehime Prefecture to foster momentum for regional decarbonization.

On the final day of the seminar, participants visited environmental technology sites in Ehime Prefecture. At MIURA CO., LTD., they toured the showroom and learned about energy supply systems centered on high-efficiency boilers and total solutions. At Daiki Axis Co. Ltd., they visited the manufacturing site for combined treatment septic tanks and learned how environmental technologies contribute to solving local challenges.

Through these site visits, participants gained concrete insights to inform future initiatives in their respective cities.
