

## "Solar Sharing Pilot Project" Site Tour held in Hanoi City

### Overview

Agritree Co., Ltd., a participating company in the inter-city collaboration project between Fukuoka Prefecture and Hanoi City, has been considering introducing solar sharing (a sustainable farming system that combines farmland and solar power generation) in Vietnam since 2021.

Through field surveys, Agritree signed MOU with the Vietnam National University of Agriculture (VNUA) and are currently conducting a pilot project at VNUA with utilizing several Japanese subsidy programs.

In October 2025, a site tour was conducted for the project stakeholders and Vietnamese companies in Hanoi. It aimed to share the project progress and to promote the solar sharing system in Viet Nam.
