Project title

Zero Carbon Society Development by Conversion of Energy from Coal in Ulaanbaatar City

Project objectives

Leveraging the experience in energy conversion and know-how in zero-carbon society development of Sapporo City, this project seeks to promote appropriate energy conversion in Ulaanbaatar City, also located in a cold region. This project is intended to help Ulaanbaatar City achieve its 2030 GHG reduction target.

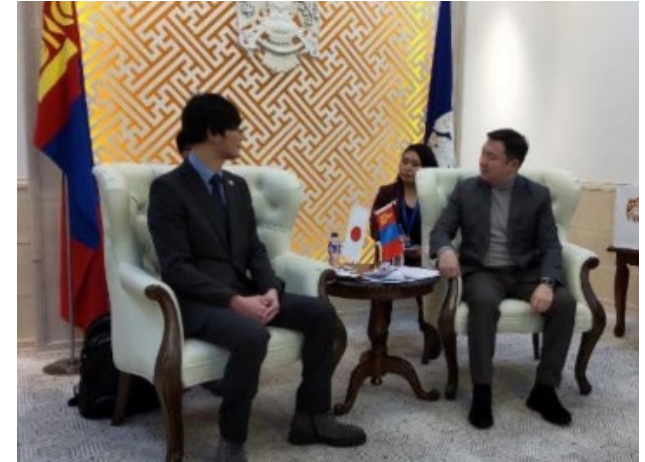

Planned activities in FY2023

Promotion of energy conversion in cold regions

- (1) Survey on the promotion of a large-scale photovoltaic JCM project
- (2) Feasibility study of JCM projects
- (3) Support for institution-building and system development

Major achievements in FY2023 & previous years

- Energy conservation calculation guidelines
- Materials on cold climate technologies in Japan
- Environmental measurements for indoor air pollution
