

Partnership to Strengthen Transparency for co-Innovation

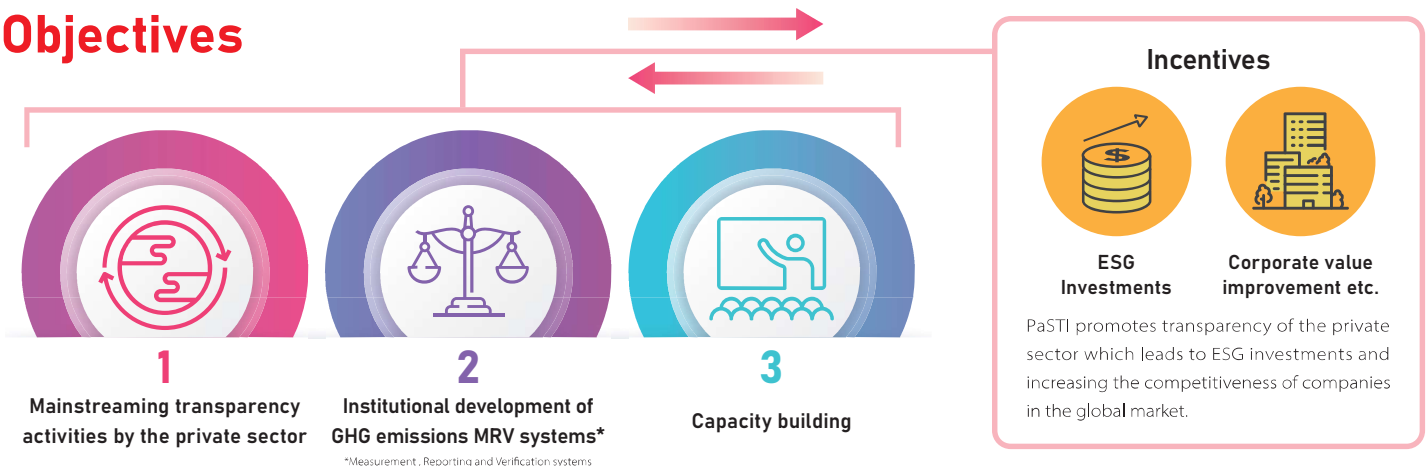

Importance of strengthening transparency within the country

As part of a country's efforts towards achieving greenhouse gas emissions reduction, and to formulate a solid long-term strategy, it is necessary to clarify (enhance transparency of) the country's emissions by collecting emissions disclosure data from the business entities within the country.

In order to improve the accuracy of emissions reporting and encourage reductions throughout the country, it is necessary for each level of emitters to calculate and report its emissions. This is why the active participation or commitment of all non-state actors such as business entities is essential.

Objectives

Co-Innovation

As part of a country's efforts towards achieving greenhouse gas emissions reduction, and to formulate a solid long-term strategy, it is necessary to clarify (enhance transparency of) the country's emissions by collecting emissions disclosure data from the business entities within the country.

Activities

Strengthening transparency actions in local, national and regional policies.

Promoting the engagement of private sector etc. with incentive mechanisms.

Developing capacities and institutional structure.
