	FY2019	203,868	0	0%
	FY2020	19,767	0	0%
FY2021	8,573	0	0%	
Pork meat, chicken meat and eggs	After the accident to the end of FY2011	1,066	6	0.6%
	FY2012	1,586	1	0.1%
	FY2013	1,486	0	0%
	FY2014	1,180	0	0%
	FY2015	908	0	0%
	FY2016	796	0	0%
	FY2017	600	0	0%
	FY2018	541	0	0%
	FY2019	531	0	0%
	FY2020	343	0	0%
FY2021	360	0	0%	

\* Coverage: 17 prefectures including the Tokyo Metropolis designated as inspection targets in the "Concepts of Inspection Planning and Establishment and Cancellation of Items and Areas to which Restriction of Distribution and/or Consumption of Foods Concerned Applies," which compiles basic approaches concerning radioactive materials in foods

Prepared based on the "Inspection Results Concerning Radioactive Cesium Concentrations in Livestock Products" by the Ministry of Agriculture, Forestry and Fisheries and the "Inspection Results Concerning Radioactive Materials in Foods" by the Ministry of Health, Labour and Welfare

Feed for livestock is controlled to reduce radionuclides contained therein as low as possible.

■ Reference values for radioactive cesium concentrations in feed

Feed for cattle and horses: 100 Bq/kg

Feed for pigs: 80 Bq/kg

Feed for chickens: 160 Bq/kg

Feed for cultured fish: 40 Bq/kg

Since April 2011, inspection results for raw milk have all been below the standard limit of 50 Bq/kg. Regarding beef and pork meat, radioactive cesium concentrations exceeding the standard limit of 100 Bq/kg have not been detected since FY2013. Regarding chicken meat and eggs, radioactive cesium concentrations exceeding the standard limit have never been detected. Incidentally, these standard limits are those applied since April 2012 (in FY2011, provisional regulation values were applied, but tabulation is based on the current standard for the purpose of comparison with the results in and after 2012).
