

Feed Management (1/2)

The reference values for feed were established in order to prevent distribution of any livestock products with radioactivity concentrations exceeding the standard limits (100 Bq/kg for general foods and 50 Bq/kg for milk).

	Reference value (Bq/kg)
Cattle	100
Pigs	80
Chickens	160
(Cultured fish	40)

Prepared based on the "Responses at Farmland" by the Ministry of Agriculture, Forestry and Fisheries (MAFF)

MAFF

The reference values were established for feed so that livestock products would not contain radioactive cesium exceeding the standard limits.

Also for feed for cultured fish, the reference value was established in the same manner.
