

## Measures to Ensure Safety of Mushrooms and Non-Wood Forest Products

- ☐ Introduce safe production materials in order to reduce radioactive contamination
- ☐ Provide information on gathering of wild plants and mushrooms

## **Specific measures**

- Secure safe mushroom logs (Support for the purchase of mushroom logs and bed logs, matching of supply and demand of mushroom logs)
- 2. Decontaminate mushroom logs and bed logs and introduce makeshift greenhouses, etc.

Prepared based on the "Inspection Results Concerning Radioactive Materials in Foods" by the Ministry of Agriculture, Forestry and Fisheries (MAFF)

MAFF

Other than wild plants and mushrooms for which cultivation management is impossible, *shiitake* mushrooms, etc. cultivated using mushroom logs show variation in radioactivity concentrations.

Therefore, efforts are being made, such as the offering of support for the purchase of safe mushroom logs and measures to reduce contamination of mushroom logs and bed logs (mushroom logs wherein mushroom fungi are planted).

In order to prevent distribution of wild plants and mushrooms with radioactivity concentrations exceeding the standard limit, each local government imposes distribution restrictions on producers and farmers markets and provides them with inspection results or other information.
