

## Inspections by Water Suppliers

Changes in Number of Specimens for Radioactive Cesium Inspection

Bq/kg: becquerels per kilogram

Prepared based on 12th Health Sciences Council's Committee on Living Environment and Water Supply in March 2012

Detection of Radioactive Cesium (Purified Water)

Water suppliers conduct inspections of radioactive cesium for approx. 6,000 to 7,000 specimens of purified water and over 100 specimens of raw water per month. The maximum monthly value of radioactive cesium concentration was 140.5 Bq/kg detected in March 2011, but the value declined gradually thereafter and there has been no report of radioactive cesium detection at a level exceeding 10 Bq/kg since June 2011.
