## Dose Limits Comparison between ICRP Recommendations and Domestic Laws and Regulations

| mSv: millisieverts                             |                        | Occupational exposure  |   | Public exposure   |  |
|--|------------------------|--|---|---|--|
|  |                        | ICRP   | Laws and regulations<br>concerning the<br>prevention of radiation<br>hazards (Japan)  | ICRP  | Laws and regulations<br>concerning the<br>prevention of radiation<br>hazards (Japan)   |
| Effective dose<br>limits                       |                        | The average annual dose for<br>the prescribed five years<br>should not exceed 20mSv and<br>the annual dose for any one<br>year should not exceed 50<br>mSv. (*1) | Same as the<br>Recommendations and the<br>annual dose for any one year<br>should not exceed 50 mSv.<br>(*3)   | 1 mSv/year (Exceptionally, if<br>the average annual dose for<br>five years does not exceed 1<br>mSv, exposure exceeding the<br>limit for a single year may be<br>sometimes permitted.) (*1) | Dose limits are not specified,<br>but doses at the boundaries of<br>business establishments,<br>including those due to exhaust<br>gas and water, are regulated<br>notto exceed the dose limit of<br>1 mSv/year. (*3) |
| Equivalent dose<br>limits                      | The Lens of the<br>Eye | The average annual dose for<br>the five years should not<br>exceed 20 mSv/year and the<br>annual dose for any one year<br>should not exceed 50 mSv. (*2)         |   | 15 mSv/year (*1)  | -  |
|  | Skin                   | 500 mSv/year (*1)  | 500 mSv/year(*3)  | 50 mSv/year (*1)  | -  |
| ũ  | Fingers and toes       | 500 mSv/year (*1)  | —   | -   | -  |
| Dose limits for<br>female radiation<br>workers |                        | The effective dose of an<br>embryo/a fetus during<br>gestation after reporting<br>pregnancy should not exceed<br>1 mSv. (*1)                                     | 5 mSv/3 months<br>Equivalent dose limit for the<br>abdominal surface after<br>coming to know of pregnancy<br>until delivery: 2 mSv<br>Internal exposure: 1 mSv (*3) | -   | -  |

- \* The Codex Alimentarius Commission is an intergovernmental body created in 1963 by the Food and Agriculture Organization of the United Nations (FAO) and the World Health Organization (WHO) for the purpose of protecting consumers' health and ensuring fair-trade practices in the food trade, etc.; The Commission establishes international standards for foods.
- \* Standard limits incorporate effects of the amount of food intake and assumed percentages of foods containing radioactive materials. Therefore, the values are not suitable for inter-comparison.
- \* Indicated standard limits for drinking water are the WHO guidance levels of radioactive materials, which are referred to in respective countries, and standard limits for radioactive materials vary by country due to differences in adopted preconditions. Therefore, the values are not suitable for inter-comparison.
