

- The Interim Storage Facility (ISF) was built to safely and intensively manage and store removed soil, waste, and incinerated ash (>100,000 Bq/kg) generated by decontamination in Fukushima Prefecture, until final disposal outside the prefecture within 30 years from the start of transportation to the Interim Storage Facility.
- Okuma Town and Futaba Town agreed to the request to build the facility, which was a very important decision. The Ministry of the Environment will continue to work on the ISF project with a "Safety First" approach.
- The total area of the planned site for the ISF is approx. 1,600 ha (almost the same as the area of Shibuya Ward in Tokyo). By the end of December 2021, the national government acquired land of approx. 1,263 ha (approx. 78.9% of the total sites).

At the ISF, the following are to be stored:

- Removed soil and waste (e.g. fallen leaves and branches, etc.) generated due to decontamination work in Fukushima Prefecture;
- Incineration ash with radioactivity concentration exceeding 100,000 Bq/kg.

The ISF is a facility to safely and intensively manage and store the above until final disposal outside the prefecture within 30 years after the commencement of interim storage. It is comprised of Reception/Separation Facilities, Soil Storage Facilities, and Waste Storage Facilities, etc.

Consent to accept the construction of the ISF was obtained from Fukushima Prefecture in September 2014 and from Okuma Town and Futaba Town in January 2015. The total area of the planned site is approx. 16 km², almost the same area as Shibuya Ward in Tokyo. By the end of December 2021, the national government acquired land of approx. 1,263 ha (approx. 78.9% of the total sites). The national government considers it most important to obtain understanding on the ISF project, not to mention building a relationship of trust with landowners, and is committed to continuing efforts while providing sufficient explanations to landowners.
