

Radiation

Where does Radiation Come from?

Material

Atom

Nucleus

Nucleus

Nucleus

Nucleus
(high-energy state)

Nucleus

α (Alpha)-particles

β (Beta)-particles
(electrons)

γ (Gamma)-rays

*X-rays are generated outside a nucleus.

Neutron rays

Example of α -disintegration

Radium-226
{ 88 protons
138 neutrons }

Transformation

Radon-222
{ 86 protons
136 neutrons }

α -particles
{ Two protons
Two neutrons }

Example of β -disintegration

Tritium
{ One proton
Two neutrons }

Neutron

Electron

Proton

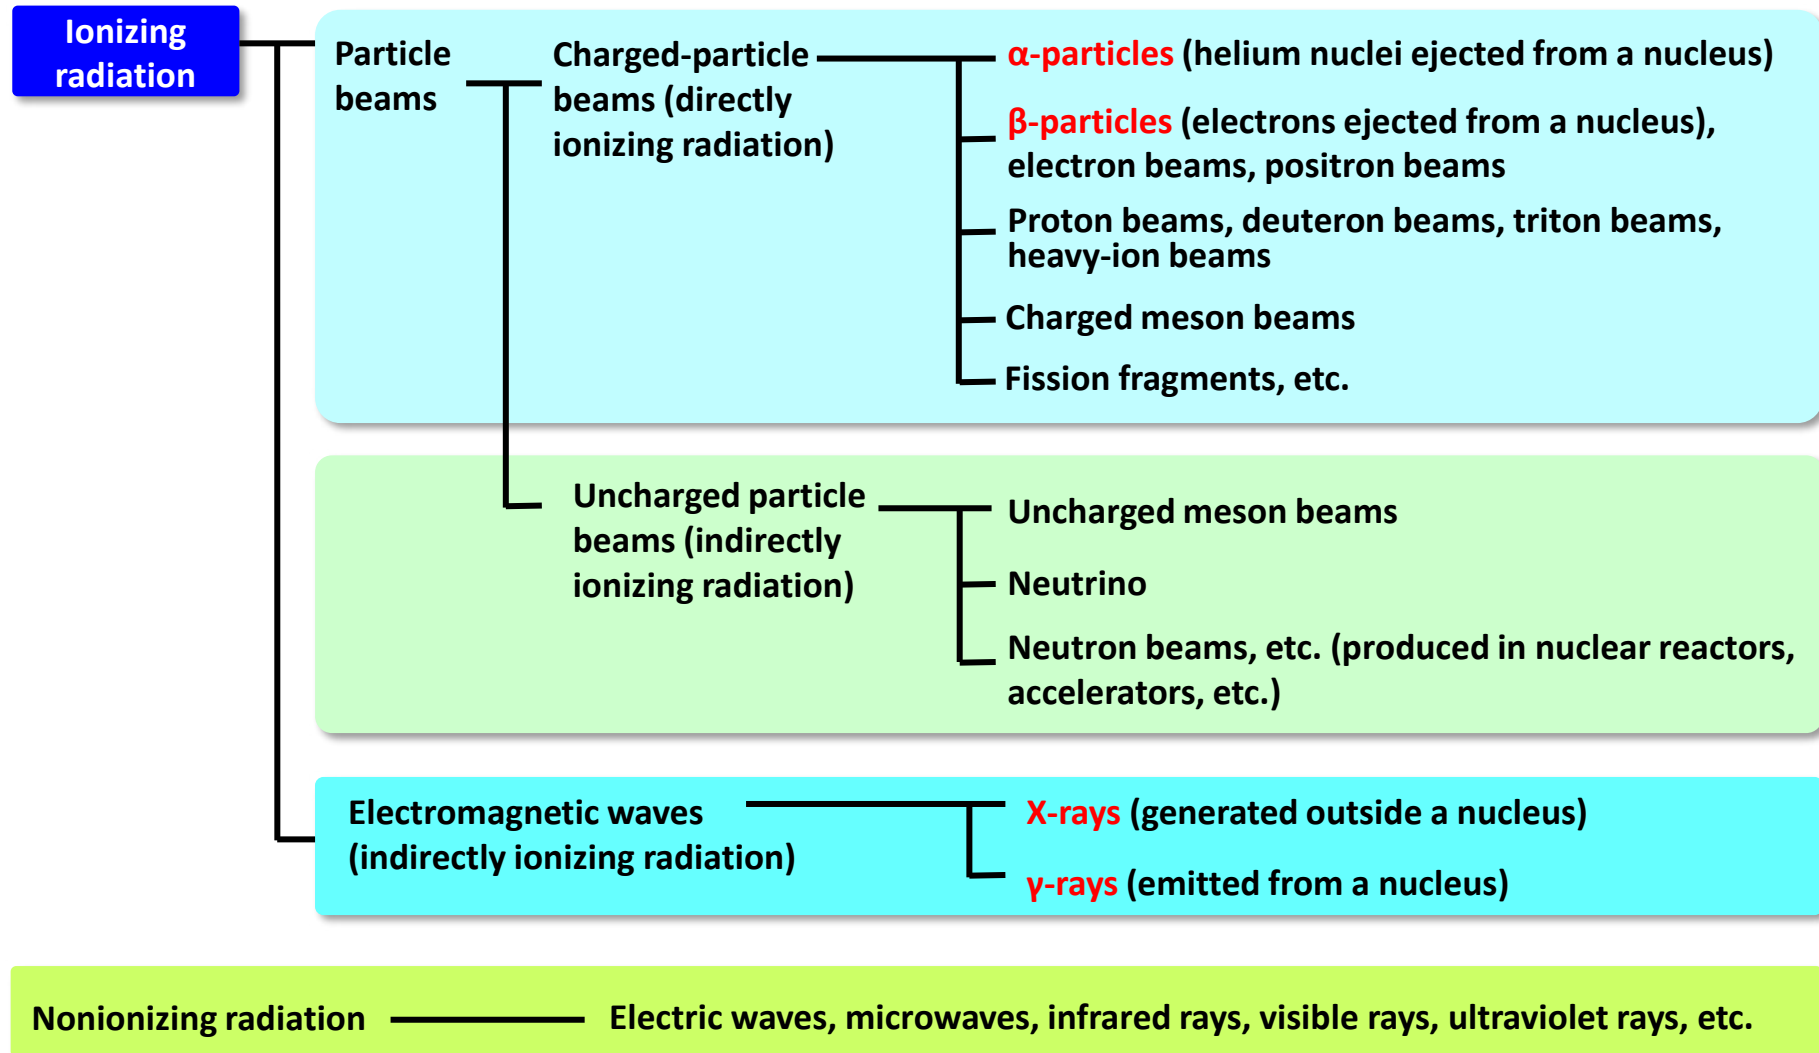

Electrons
(β -particles)

Helium-3
{ Two protons
One neutron }

Radiation

Types of Radiation

While radiation includes ionizing radiation and nonionizing radiation, radiation usually means ionizing radiation.

Source: Partially revised "Ionizing Radiation" in the Encyclopedia for Public Acceptance of Atomic Energy Accessible on the Internet, ATOMICA

Ionizing radiation

Radiation that causes ionization

Particle beams

Electromagnetic waves

Braking X-rays

Characteristic X-rays

Structural drawing of an X-ray generator

Types of Electromagnetic Waves

- Light has particle properties in addition to wave properties.
- Electromagnetic waves are called "photons" when they are considered as particles.

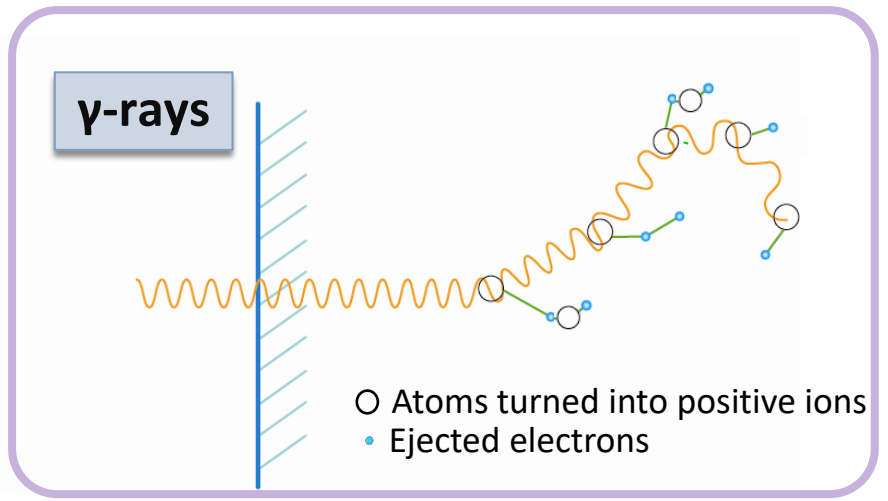

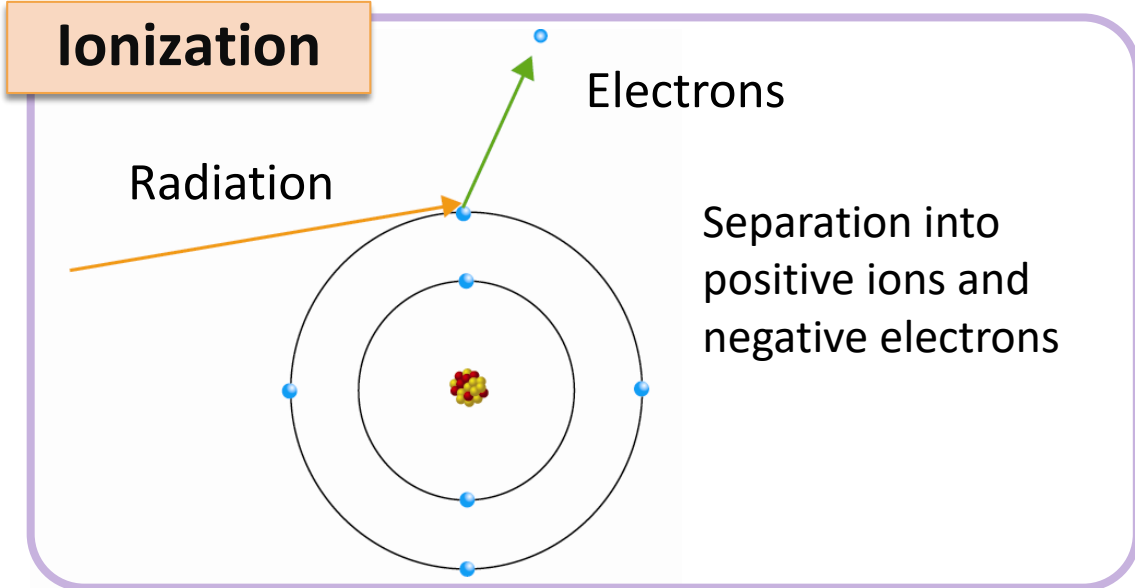

The values indicated above show photons' energy (eV) and those indicated below show their wavelengths (m) as wave motions.

pm: picometers
nm: nanometers

μm : micrometers
eV: electron volts

Ionization of Radiation - Property of Ionizing Radiation

- **α -particles**

- Two protons plus two neutrons
- Helium (He) nuclei
- Charged particles (2+)

High ionization density

- **β -particles**

- Electrons (or positrons)
- Charged particles (- or +)

Low ionization density

- **γ -rays and X-rays**

- Electromagnetic waves (photons)

Low ionization density/high
penetrating power

- **Neutron beams**

- Neutrons
- Uncharged particles

High ionization density

When the ionization number is the same, the higher the ionization density is, the larger the biological effects are.

Penetrating Power of Radiation

Radiation can be blocked by various substances.

Radiation

Penetrating Power of Radiation within the Body

Radiation

Penetrating Power and Range of Effects on the Human Body

When radioactive materials are located outside the body

When radioactive materials are located within the body
