Expert Committee Members	1
Process of Study by the Expert Committee	2
Considerations for the Compilation of this Report	3
Draft of Climate Change Tax: <i>Proposal for a national dialog</i>	6
1. Current state of measures for combating climate change, and merit of Climate Change Tax in this context	6
<i>Why should we study Climate Change Tax?</i>	
2. Nature and requirements of a tax.....	12
<i>What should we tax to combat climate change, and who will pay?</i>	
3. Thinking on Reducing the Tax Burden.....	14
<i>For example, should companies and people who aggressively implemented measures also be assessed a tax?</i>	
4. Thinking on Uses for Tax Revenues	15
<i>How should revenues from Climate Change Tax be used?</i>	
5. Thinking on relationship between existing energy-related taxes	20
<i>There are already taxes on fossil fuels: petroleum/coal tax and volatile oil tax. If these taxes could reduce CO₂ emissions, and the revenues from them could be used to combat climate change, then why are we studying Climate Change Tax?</i>	
6. Effects of Climate Change Tax and positive and negative impact on the economy.....	21
<i>Petroleum and other sources of energy are required purchases. How will raising their tax burden affect the economy?</i>	
Study of Alternate Proposals <i>Are there any other proposals for Climate Change Tax?</i>	25
Conclusion: <i>Points for consideration for further study by the government</i>	27
