Notes:

- Indicators are the same as the material flow indicators in the Third Fundamental Plan for Establishing a Sound Material-Cycle Society .
- To estimate resource productivity by industrial sector, 1995-2000-2005 linked input-output table compiled by Ministry of Internal Affairs and Communications and extended input-output table and simple extended input-output table compiled by Ministry of Economy, Trade and Industry were used. Each table adopts the 2005 standard. Also, note that the estimation gives an effective overview of trends, but cannot do so for inter-sectorial comparison.
- 1990 data and 2000 data remain as those years were used for comparison when indicators in the First Fundamental Plan for establishing a sound material-recycle society were set.

4.03 Waste Disposal Flow Sheet

- ※ Figures in ( ) indicate actual in the previous year.
- Collected waste = ①+②+③+④+⑤+⑥=38,095 thousand tons
  - Collected waste + Waste directly brought in = ①+②+③+④+⑤+⑥+⑦=41,814 thousand tons
  - Total emissions of waste = ①+②+③+④+⑤+⑥+⑦+⑧=44,317 thousand tons
  - Generation per person per day = (①+②+③+④+⑤+⑥+⑦+⑧)/total population/365=947 g/person/day
  - Total amount of waste disposal = ⑩+⑪+⑫+⑬=41,841 thousand tons
  - Total amount of recycling = ⑭=9,129 thousand tons
  - Recycling rate = ⑭/(⑧+⑩+⑪+⑫+⑬)=20.6%
  - Reduction amount of intermediate treatment = (⑪+⑫) - amount of recycling after intermediate treatment - Landfill residue =30,912 thousand tons

2014	31,242	13,075	44,317	38,095	3,718	2,503	44,317

## Notes:

- "Total waste generated" = "Scheduled pickup" + "Carried-in by individual" + "Collected in groups"
- A generated amount of general waste has been defined "Scheduled pickup" + "Carried-in by individuals" + "Collected in groups" under "The basic strategy of comprehensive and deliberate promotion on reduction of waste and other appropriate measures" based on "Waste Disposal Law".
- "Household Waste" includes "Waste collected in groups."
- The figures in parentheses in "Waste collected in groups" column show "self-treated waste."
- The amount of "self-treated waste" is the estimates by municipalities.

## Notes:

- As for the population, the data are based on Basic Resident Register as of October 1st of each year, while some of them are the ones as of March 31.
- "Collected waste in groups" refers to "Self-treated Waste" until 1984.
- Waste generation per person per day = (Scheduled pickup + Carried-in by individuals + Collected in groups) / total population /365 (or 366)
- Waste generation per person per day = (Waste from life activities + Waste from business activities) /total population /365 (or 366)

## Notes:

- Processing rate of reduction = (direct incineration+ bulk-waste treatment facilities+ waste composting facilities+feedstuff-production facilities + methanation facilities + fuel-production plant + other recycling facilities + other facilities + direct recycling ) + amount of waste treatment × 100
- Household waste includes the amount of group recovery.

4.06 Waste Treatment by Prefecture (2)

(Actual 2014)

	Amount of Waste disposal													Amount recycled after intermediate reprocesses (thousand tons)	Recycling rate (%)	Amount of Final disposal				
	Direct incineration (thousand tons)	Direct final disposal (thousand tons)	Intermediate non-incineration reprocesses										Total (thousand tons)			Rate of weight-reduction treatment (%)	Direct final disposal (thousand tons)	Incineration residue (thousand tons)	Non-incineration reprocesses residue (thousand tons)	Total (thousand tons)
			Bulkwaste disposal facility (thousand tons)	compositing facilities (thousand tons)	Feedstuff-production facilities (thousand tons)	Methanation facilities (thousand tons)	Fuel-production plants (thousand tons)	Recycling facilities (thousand tons)	Other facilities (thousand tons)	Direct recycling (thousand tons)

## Power generation by waste incineration plants

Classification	# of Generation plants	Total Generation capacity (MW)	Generation efficiency (%)	Total generation amount (GWh)
FY2001	236	1,246	10.43	5,538
2002	263	1,365	10.06	6,366
2003	271	1,441	10.23	7,100
2004	281	1,491	10.50	7,129
2005	286	1,512	10.70	7,090
2006	293	1,590	10.93	7,190
2007	298	1,604	11.14	7,132
2008	300	1,615	11.19	6,935
2009	304	1,673	11.29	6,876
2010	306	1,700	11.61	7,210
2011	314	1,740	11.73	7,487
2012	318	1,754	11.92	7,747
2013	328	1,770	12.03	7,966
2014	338	1,907	12.42	7,958

Notes:

- The figures in the table above include facilities of which construction started in the indicated fiscal year and of which operations are suspended temporarily, but abolished facilities are excluded.

- Generation efficiency is calculated by the following equation.

$$\text{Generation efficiency [\%]} = \frac{860[\text{kcal/kWh}] \times \text{total generation amount [kWh/year]} / 1,000[\text{kg/t}] \times \text{amount of Waste incineration [t/year]} \times \text{amount of Waste heat generation [kcal/kg]}}{\text{total generation amount [kWh/year]}}$$

- In this survey, the specifications and the publicized values for the standard quality of waste have been inquired about. However, it is calculated by actual values in the case there are no specifications, etc.

Notes:

- The facilities in this chart are the ones that were built by the municipalities and the consortiums. It excludes the shutdown facilities but include the ones whose constructions started in indicated each fiscal years and the ones temporarily closed just for the indicated current year.
- "Recycling facilities" are facilities for sorting non-combustible waste, for compressing and packing waste (including the preconditioning facilities and the facilities located in the final disposal sites), for turning combustible waste and garbage into compost, and for processing into feedstuff, and the methanation facilities. "Bulk waste disposal facilities" and "Refuse-derived fuel plants" are not included in them.
- Before 1997, ①the facilities other than for sorting or recycling recyclable waste, ②the facilities not categorized as "Refuse-derived fuel plants" and the facilities categorized as both ① and ② were classified as "Others", but from the field survey in FY1998, the facilities to crush and reduce volume for landfill have been classified as "Others" regardless of the purpose whether or not to recycle waste.
- From FY2005, "Recycling facilities" have been classified as "Separation", "Compression & Packing", "Into compost", "Into feed", "Methanation" and "Others", and the "High speed composting facilities" is included in "Recycling facilities". The number in the parentheses under "Waste into compost" is solely the number of "High-speed composting facilities" and is included in the total facilities.
- The methanation facilities have been included in "Refuse-derived fuel plants" since FY2007.

## 4.09 Development of Recycling Facilities (2)

Changes in number of bulky waste facility and operating capacities

Type	Combination		Crushing		Compression		Total	
	# of Facilities	Operating capacities (t/day)						
FY1981							417	17,385
1982							440	17,279
1983							471	19,472
1984							494	20,291
1985							538	21,162
1986							541	22,693
1987							556	23,279

## Notes:

- "Bulky waste disposal facilities" are the ones to crush and compress into small pieces and also to look for the valuables out of the bulky waste.
- The facilities in this chart are the ones that were built by the municipalities and the consortiums. It excludes the shutdown facilities but include the ones whose constructions started in the indicated fiscal years and the ones temporarily closed just for the indicated year.
- "Crushing": The facilities to crush combustible bulky waste into small pieces for incineration.
- "Compression": The facilities to crush and compress incombustible bulk waste into small pieces.
- "Combination": The facilities to crush both combustible and non-combustible bulky waste.

## Notes:

• Facility is defined as final disposal site built by a municipality or a consortium including a one established by Tokyo Metropolitan government, and also including a one of which construction started in an indicated year.

• The number of remaining years represents the period (yrs.) of the site capacity available until it gets filled with landfill waste, without newly developing final disposal sites. It is calculated by the equation of (the residual volume at the end of the fiscal year) ÷ (the final disposal volume of the fiscal year ÷ weight of landfill waste). (Landfill waste density: 0.8163)

• In FY2005, residual volume and remaining years were recalculated retro-respectively; an incremental residual volume in the amount of 7,737,000 m<sup>3</sup> reflecting aerial survey results, and so forth, was added up to that in each year prior to 2005. Accordingly, remaining years for each year were recalculated.

• The facilities in the above table include the ones whose construction started in an indicated fiscal year and the ones temporarily closed just for that year, but exclude the shutdowns.

## 4.16 Changes in Annual Expenditures for Waste Management Program

(Unit: 100 million yen)

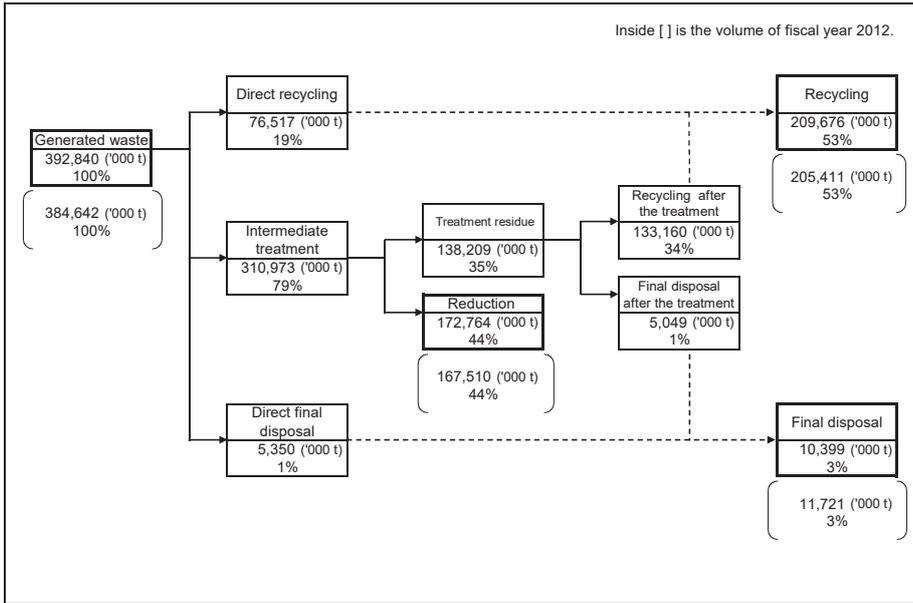

FY1982	12,697
1983	13,075
1984	13,213
1985	13,545
1986	13,926
1987	14,427
1988	14,493
1989	16,190
1990	17,563
1991	19,986
1992	22,663
1993	27,404
1994	26,269
1995	26,542
1996	26,990
1997	26,654
1998	26,694
1999	26,519
2000	27,381
2001	29,464
2002	27,309
2003	22,746
2004	22,450
2005	22,161
2006	21,344
2007	21,060
2008	20,557
2009	20,572
2010	20,605
2011	20,167
2012	20,052
2013	20,715
2014	21,683

Note:

Expenditure of waste management program = Waste management expenses + night-soil disposal expenses

Notes:  
 \* The sum of the industrial waste to each industry may not be exactly the same as that of the total figures due to rounding.  
 \* Because of the revision of Japan Standard Industrial Classification, the new industrial classification has been used since 2008.

Industrial classification comparison between the New and the Previous

## Notes:

- 1) A figures is the number of illegal dumping cases that were identified and reported in an indicated year.
- 2) The aggregated amount of illegal dumping in each column does not match the total value because of rounding.
- 3) The number of cases in a government-decreed cities is included in the prefecture in which the city is situated.

## 4.22 Number of illegal-dumping cases of Industrial Waste and volume dumped by Prefecture (including Newly-reported cases) (2)

## Notes:

- "Administrative advice, etc." means such governmental action as an administrative advice, collection of reports, a site inspection, an order for improvement, accusation, order of business suspension, nullification of business licenses, nullification of facility construction permits, etc.
- The aggregated amount of the remaining volume and the rates in each column doesn't match the total value because of rounding.

## 4.28 Wide-area movement of municipal waste

(Unit : 10 thousand t / yr.) (FY2014)

Region	Final disposal amount	Transported out of Prefectures <sup>1)</sup>		Transported out of the Region <sup>2)</sup>	
		Amount	Percentage	Amount	Percentage
Hokkaido / Tohoku	91.0	1.7	(1.9%)	0.3	(0.4%)
		6.7%		2.1%	
Tokyo Metropolitan area	121.5	15.1	(12.4%)	8.0	(6.6%)
		58.0%		51.8%	
Hokuriku / Chubu	60.5	7.7	(12.8%)	6.2	(10.3%)
		29.7%		40.2%	
Kinki	91.9	0.7	(0.7%)	0.4	(0.5%)
		2.5%		2.9%	
Chugoku / Shikoku	34.3	0.7	(2.0%)	0.4	(1.2%)
		2.7%		2.7%	
Kyushu / Okinawa	49.8	0.1	(0.2%)	0.1	(0.1%)
		0.4%		0.5%	
Total	449.0	26.0	(5.8%)	15.5	(3.5%)
		100.0%		100.0%	

## Notes:

- 1: A simple regional aggregation of the municipal wastes of which final disposal was outsourced to public corporations/businesses outside the prefecture by a municipality. However, the amount outsourced to Osaka Bay Regional Offshore Environmental Improvement Center is not included.
- 2: The amount of municipal wastes of which final disposal was outsourced to public corporations/businesses outside the region by municipalities.
  - The sum may not exactly match the total value because the unit is rounded off.
  - The percentage in the parentheses (%) shows that of the final disposal amount.
  - The figures in the lower row for each region show the regional rate of the final disposal amount transported out of the prefecture and the region respectively.

Source: "Report of further study on regional waste management (cf. "Current status of Regional waste disposal") and the amount of waste recycling," Ministry of the Environment

#### 4.29 Wide-area movement of industrial waste

( Unit : 10 thousand t / yr.) (FY2014)

	Amount transported out of prefectures where waste was discharged			
			Inside the region	Outside the region
Hokkaido / Tohoku	289.7	(7.3%)	178.7	111.0
Tokyo Metropolitan area	1,854.4	(46.4%)	1,551.3	303.1
Chubu	689.0	(17.3%)	362.4	326.6
Kinki	614.1	(15.4%)	376.3	237.7
Chugoku	231.3	(5.8%)	117.1	114.2
Shikoku	92.9	(2.3%)	31.2	61.7
Kyushu / Okinawa	221.0	(5.5%)	170.5	50.5
Total	3,992.4	(100.0%)	2,787.6	1,204.9

Note:

The sum value may not exactly match the total because the unit less than 1,000 tons are rounded.

1988	11,020	8,610	4,880	2,760	2,120
1989	11,910	9,570	5,060	2,910	2,150
1990	12,630	9,990	5,570	3,130	2,440
1991	12,800	10,070	6,220	3,450	2,770
1992	12,580	9,280	6,920	3,910	3,010
1993	12,250	9,020	7,560	4,190	3,370
1994	13,040	9,660	8,460	4,230	* 4,230
1995	14,030	9,790	8,840	4,430	* 4,410
1996	14,660	10,810	9,090	4,550	* 4,540
1997	15,210	11,360	9,490	4,780	* 4,710
1998	13,910	10,200	9,840	4,990	* 4,850
1999	14,570	10,810	9,760	4,860	* 4,900
2000	14,740	10,980	9,970	5,080	* 4,890
2001	13,880	10,960	10,160	5,280	* 4,890
2002	13,850	10,570	9,900	5,080	* 4,820
2003	13,979	11,005	10,010	5,131	* 4,879
2004	14,460	11,360	10,130	5,190	* 4,940
2005	14,510	11,590	10,060	5,200	* 4,860
2006	14,450	11,200	10,050	5,080	* 4,980
2007	14,650	11,030	9,940	5,020	* 4,920
2008	13,450	10,890	9,980	5,020	* 4,960
2009	11,210	8,430	9,120	4,440	* 4,680
2010	12,700	9,700	9,450	4,590	* 4,860
2011	11,590	9,870	9,520	4,650	* 4,860
2012	10,540	9,600	9,290	4,460	* 4,820
2013	10,600	9,660	9,400	4,540	* 4,860
2014	10,610	9,700	9,260	4,420	* 4,830
2015	10,860	9,640	9,150	4,350	* 4,800

Note:

• Domestic consumption of resin products = (Production of resin) - (export volume of resin) + (import volume of resin) - (amount of liquid resin) - (amount of processing losses) + (recycled resin input) - (export volume of product) + (import amount of product)

• \* Since 1994, the unused volume of production/process and loss volume during processing have been added to the volume of industrial waste.

**4.32 Changes in sales amounts of aluminum cans and recycling ratio**

	Total weight sold (1,000 t / year)	Weight recycled (1,000 t / year)	Recycling rate (%)
1984	54	22	40.6
1994	248	151	61.1
2001	283	235	82.8
2002	292	243	83.1
2003	297	243	81.8
2004	303	261	86.1
2005	302	276	91.7
2006	299	271	90.9
2007	301	279	92.7
2008	299	261	87.3
2009	293	274	93.4
2010	296	274	92.6
2011	298	276	92.5
2012	301	285	94.7
2013	304	255	83.8
2014	313	273	87.4
2015	332	256	77.1

Note:

Recycling rate refers to percentage of aluminum can scrap that was recycled to aluminum can materials, car parts, a deoxidizing agent and the like for steel-making, among the consumed aluminum cans.

Source: Compiled from materials by Japan Aluminum Can Recycling Association

### 4.33 Changes in consumption and recycling rate of steel cans

	Total weight sold (1,000 t/year)	Weight recycled (1,000 t/year)	Recycling rate (%)
1984	1,027	341	33.2
1994	1,475	1,030	69.8
2001	1,055	899	85.2
2002	949	817	86.1
2003	911	797	87.5
2004	908	791	87.1
2005	770	868	88.7
2006	832	732	88.1
2007	834	710	85.1
2008	772	683	88.5
2009	699	623	89.1
2010	684	612	89.4
2011	682	616	90.4
2012	664	603	90.8
2013	611	567	92.9
2014	571	525	92.0
2015	486	451	92.9

Notes:

- Before 1998, production amounts are used for consumption weights and used amounts of steel can scrap are used for collected weights.
- Recycling rates = recycled weight / weight of consumption

Source: Compiled from materials by Japan Steel Can Recycling Association

### 4.34 Change in recovery rate of cardboard

	Recovery rate (%)
2004	84.0
2005	86.9
2006	88.4
2007	90.3
2008	92.1
2009	94.8
2010	95.0
2011	93.3
2012	94.1
2013	95.3
2014	96.7
2015	97.2

**Notes:**

• Recovery rate = [A] Real recovery amount of cardboard, waste paper, etc. / ([B] Consumption amount of base paper for cardboard + [C] Amount of products for import and export )

[A] is calculated by subtracting a weight of waste paper other than other than cardboard-origin and glue adhered on the cardboard from the collected weight of waste cardboard.

[B] refers to consumption amount of cardboard base-paper at cardboard factories.

[C] refers to an excess amount of exports (over imports) of cardboard used to pack import and export products.

※ Revised calculation method for recovery rate

According to the previous method, the weight of any brand products other than cardboard and foreign materials contained in collected waste was calculated on an assumption that they were contained with the same ratio as that in the domestic shipping amount of the base paper for cardboard and the consumption amount of it in the plants. This time, an inspection at factory sites by opening collected cardboard was conducted to find out that the ratio of weight of other brand products than cardboard and foreign materials was 8.4%. The new recovery rate is calculated by this ratio, that is lower than the previous ratio by 3 to 5 %.

## 4.35 Changes in production volume and recovery ratio of PET bottles

(Unit : ton/year)

	Amount of sorted-collection by municipalities	Production of PET resin (actual demand)					Sales of designated PET bottles (1,000 ton)	Municipal recovery rate <sup>2)</sup>	Recovery rate (including business-related waste)
		Soft drinks	Specified seasonings without oil	Sake, etc.	Other <sup>1)</sup>	Total			
1995	2,594	118,831	13,491	9,788	30,720	172,830		1.8%	
1996	5,094	149,088	13,581	10,233	30,521	203,423		2.9%	
1997	21,361	194,748	13,222	10,836	32,923	251,729		9.8%	
1998	47,620	258,793	12,900	10,234	31,972	313,899		16.9%	
1999	75,811	308,222	12,501	11,479	38,284	370,486		22.8%	
2000	124,873	338,654	12,829	10,461	39,452	401,396		34.5%	
2001	161,651	380,372	11,265	11,090	40,053	442,780		40.1%	44.1%
2002	188,194	391,126	12,076	9,363	33,308	445,873		45.6%	53.4%
2003	211,753	412,970	12,606	10,980	34,175	470,731		48.5%	61.1%
2004	238,469	490,173	11,174	12,365	35,839	549,551		46.4%	62.3%
2005	251,962	509,684	10,995	11,904	38,027	570,610	530	47.5%	61.7%
2006	268,266	515,414	11,100	11,970	38,998	577,482	544	49.3%	66.3%
2007	283,441	533,091	13,175	11,583	41,363	599,212	572	49.6%	69.3%
2008	283,866	520,120	21,644	14,511	45,779	602,054	573	49.5%	77.7%
2009	287,340	511,080	21,121	14,500	46,545	593,246	565	50.9%	77.4%
2010	296,815	521,657	21,991	13,972	42,930	600,550	596	49.8%	72.2%
2011	297,839	511,412	20,339	13,363	37,893	583,007	604	49.3%	79.6%
2012	299,241	529,989	24,049	14,948	41,046	610,032	583	51.3%	90.4%
2013	301,787	568,340	25,553	15,291	44,620	653,804	579	52.1%	91.3%
2014	292,455	571,905	21,784	13,770	45,465	652,925	569	51.4%	93.5%
2015	292,881	587,322	27,191	9,293	53,584	677,390	563	52.0%	92.4%

## Notes:

1. Except soft drinks, specified seasonings without oil, alcoholic beverages: namely, detergent, shampoo, cooking oil, other seasoning, cosmetics, pharmaceutical products, and the like.
2. Municipal recovery rate = Amount of municipal sorted collection ÷ Sales volume of PET bottles  
(Until the end of fiscal year 2004, defined as Municipal recovery rate = Amount of municipal separate collection ÷ Production volume of resin )

Source: Compiled from materials of the Council for PET Bottles Recycling

and "The Performance of Sorted Collection and Recycling by Municipalities under the Containers and Packaging Recycling Act in FY 2015" by Ministry of the Environment

### 4.36 Utilization of products from recycled PET bottles

(Unit : ton / year)

	Fiber	Sheet	Bottle	Molding	Other	Total
2010	79,824	57,646	8,940	6,443	339	153,192
2011	79,074	59,563	7,534	7,815	370	154,357
2012	74,605	61,684	12,343	6,027	357	155,017
2013	73,635	69,108	19,581	6,081	400	168,805
2014	67,347	59,152	19,667	3,664	225	150,056
2015	66,946	73,038	17,190	3,554	299	161,026
2016	56,519	68,758	24,554	3,466	840	154,137
Ratio (FY 2016)	36.7%	44.6%	15.9%	2.2%	0.5%	100.0%

Source: Materials by the Japan Containers And Packaging Recycling Association

### 4.37 Changes in sales volume and collection rate of household cartons

(Unit: ton / year)

	Sales volume	Collection volume	Collection rate
FY2002	171,840	39,914	23.2%
2003	181,100	44,300	24.5%
2004	188,400	46,300	24.6%
2006	191,200	48,100	25.2%
2007	194,100	55,600	28.6%
2008	189,300	56,700	30.0%
2009	184,300	57,300	31.1%
2010	184,600	56,600	30.7%
2011	184,800	56,200	30.4%
2012	180,300	57,200	31.7%
2013	178,500	59,400	33.3%
2014	176,200	60,400	34.3%
2015	176,200	56,300	32.0%

## Notes:

- Loss of paper from beverage makers, collected cartons from households, and milk cartons for school lunch, are not assumed to include aluminum-coated cartons.
- Collection rate of household paper cartons = volume collected from households / manufacturers' sales volume of paper cartons for home-use beverages

Source: Compiled from materials by Committee for Milk Container Environmental Issues

#### 4.38 Achievement on Sorted Collection and Recycling based on the Containers and Packaging Recycling Act

		Estimate (t)	Actual (t)	Recycled (t)	Municipalities conducting sorted collection		
					# of municipalities conducting collection	Rate (%)	Population coverage rate (%)
Clear glass bottles	FY1997	406,133	292,775	275,119	1,610	49.5	76.8
	2010	358,442	326,614	310,356	1,660	94.9	98.9

#### 4.41 Volumes of construction waste by type

(FY2012)

Type	Volume (1,000 t)	Percentage (%)
Asphalt, concrete blocks	25,770	35
Concrete blocks	30,920	43
Construction sludge	6,570	9
Mixed construction waste	2,800	4
Waste wood generated from construction	5,000	7
Others	1,640	2
Nation-wide total	72,690	100

## Notes:

- The total volume may not foot due to rounding off.
- Waste wood generated from construction includes the volume of logging wood and root wood and the like.

Source: "Survey on Construction By-products 2012," Ministry of Land, Infrastructure, Transport and Tourism

#### 4.42 Recycling of construction waste by item

(Unit : %)

	Construction waste	Asphalt, concrete blocks	Concrete blocks	Wood generated from construction (excludes Reduction)	Wood generated from construction (includes Reduction)	Construction sludge (includes Reduction)	Mixed construction waste (10,000 t)
FY 1990	42	50	48	56	—	21	31
1995	58	81	65	40	—	14	11
2000	85	98	96	38	82	41	485
2002	92	99	98	62	90	68	337
2005	92	98	98	68	91	75	293
2008	94	98	97	80	89	85	267
2012	96	99	99	89	94	85	280

## Notes:

- Wood generated from construction includes the number of logging wood and root wood and the like.
- Recycling, etc.=Amount of recycling, etc. / amount of generation
- Reduction refers to incineration and dehydration, etc.

Source: Compiled from "Survey on Construction By-products 2012," Ministry of Land, Infrastructure, Transport and Tourism

**4.43 Generation and treatment of food waste**

FY 2012

(Unit : 10,000 t)

	Total amount generated	Amount disposed					
		Incinerated and/or landfilled	Amount recycled				Amount reduced
			Composted	Animal Feed Produced	Others	Total	
Municipal waste	1,953	334	249	983	162	1,394	225
Household	839	—	—	—	—	—	—
Businesses	889	—	—	—	—	—	—
Industrial waste	822	767	—	—	—	54	—
Total	2,775	1,101	—	—	—	1,449	—

2010	3,648,428	3,048,627	3,833,989	(154,972)	6,516,840	(2,867,100)
2011	2,963,642	2,441,715	3,083,162	(123,358)	5,177,173	(2,288,072)
2012	3,405,662	2,900,043	3,567,777	(152,499)	6,053,494	(2,698,623)
2013	3,433,356	2,974,479	3,587,714	(147,664)	6,064,548	(2,696,864)
2014	3,331,901	2,927,357	3,503,381	(147,624)	5,901,803	(2,616,185)
2015	3,156,459	2,774,004	3,306,187	(136,453)	5,531,795	(2,457,437)

Note:

The figures for fiscal year 2004 are the totals from January to March, 2005 after the enforcement of the law.

Source: Compiled from "State of enforcement with the End-of-Life Vehicle Recycling Law 2015" by Ministry of Economy, Trade and Industry as well as by Ministry of the Environment

## 4.45 Rate of recycling of Shredder dust (ASR) and the like by automobile manufacturers

(Unit : %)

		Shredder dust	Airbag etc.
Goals	2005~	30	85
	2010~	50	
	2015~	70	

Actual	FY 2004	49~69.1	91.6~100
	FY 2005	48.0~70.0	93.0~94.7
	FY 2006	63.7~75.0	93.5~95.1
	FY 2007	64.2~78.0	92.0~94.7
	FY 2008	72.4~80.5	94.1~94.9
	FY 2009	77.5~82.1	93.2~100
	FY 2010	79.9~87	93~100
	FY 2011	92~94	92~100
	FY 2012	93~96.8	93~95
	FY 2013	96~97.7	94~95
	FY 2014	96.8~98.1	94~95
	FY 2015	96.5~98.8	93~94

Notes:

- Recycle rate is indicated by the following equation.

$$\frac{\text{Amount of ASR loaded into regeneration facilities} + \text{Amount equivalent to ASR contained in dismantled ELVs loaded into electric furnaces} - \text{Amount of ASR-originated residue from regeneration facilities and electric furnaces}}{\text{Total ASR weight collected by automobile manufactures} + \text{Amount equivalent to ASR contained in dismantled ELVs loaded into electric furnaces}}$$

- ASR : Automotive shredder residue, a mixture of metallic waste resulting from the shredding of automobiles.
- Airbags: Total weight of the airbags that have been regenerated to be used as parts of the products / Total weight of the airbags that have been collected by automobile manufactures and the like.
- The figures for fiscal year 2004 are the totals from January to March, 2005 after the enforcement of the law.

Source: Compiled from "State of Enforcement with the End-of-Life Vehicle Recycling Law 2015" by Ministry of Economy, Trade and Industry respectively

## 4.46 Voluntary collection and resource regeneration of PC and small rechargeable batteries

## (1) Voluntary collection

## PC (household and business total)

## Small rechargeable batteries

Product groups	Weight (t)
NiCad batteries	715
Nickel hydride batteries	187
Lithium Rechargeable Batteries	365
Small valve regulated lead-acid batteries	725
Total	1,993

## PC

Product groups	Number collected (piece)
Desktop PC	133,051
Notebook PC	191,285
CRT-type display device	23,342
LCD display device	162,153
Total	509,831

## (2) Resource regeneration

## PC

Product groups	Treatment amount (t)	Resource regeneration amount (t)	Resource regeneration rate (%)	Statutory target (%)
Desktop PC	1,249	978	78.3	50
Notebook PC	521	319	61.1	20
CRT type display device	385	285	73.9	55
LCD display device	1,184	879	74.2	55
Total	3,340	2,460		

## Small rechargeable batteries

Product groups	Treatment amount (t)	Resource regeneration amount (t)	Resource regeneration rate (%)	Statutory target (%)
NiCad batteries	643	460	71.5	60
Nickel hydride batteries	169	129	76.6	55
Lithium Rechargeable Batteries	339	189	55.9	30
Small valve regulated lead-acid batteries	725	363	50.1	50
Total	1,876	1,141		

## Note:

Resource regeneration refers to using it as reproduction resource.

The total volume may not foot due to rounding up/down.
