## Overview 1

## The World Has Reached a Turning Point in the Creation of a Low Carbon Society, and Japan's Efforts

### Chapter 1 Countries Joining Forces to Tackle Global Warming ..... 2

The Bali Action Plan and other agreements were concluded in the 13th Conference of the Parties to the United Nations Framework Convention on Climate Change in December 2007. As the Chair of the G8 Hokkaido Toyako Summit slated for July this year, Japan will take initiative to tackle global warming in support of the Bali Action Plan.

Section 1 Significance of the Bali Action Plan ..... 2

Section 2 The World Has Reached the Turning Point and the Days Ahead ..... 4

### Chapter 2 World Trends in the Creation of a Low Carbon Society ..... 10

Today, countries in the world have started making deep cuts in GHG emissions to keep the world's overall emissions at levels absorbable by nature to create a truly affluent society. In other words, they have taken their first step towards a low carbon society. In this chapter, we will examine world trends in the creation of a low carbon society, from the perspectives of market economy and people's livelihoods.

Section 1 Global Warming and Market-oriented Economy ..... 10

Section 2 Global Warming and People's Daily Lives in the World ..... 24

### Chapter 3 Policy Measures Taken by Japan to Create a Low Carbon Society and Japan's International Contributions ..... 36

In a global trend aspired to the realization of a low carbon society, Japan is proactively tackling global warming. Here in this chapter, we will introduce its mitigation measures, its development and dissemination of technology in the industrial sector which is the pillar of Japan's efforts to build a low carbon society, and its assistance to developing countries to help curb their rapidly rising GHG emissions.

Section 1 Achieving the Target of Kyoto Protocol's First Commitment Period ..... 36

Section 2 Drastic Reduction of Greenhouse Gas Emissions in the Mid-to-long Term ..... 39

Section 3 Japan's Contribution to Global Warming Measures in the Asian Region ..... 50

### Conclusion: The World at a Turning Point in Building a Low Carbon Society ..... 56

## Overview 2

## The World Has Reached a Turning Point in the Creation of a Sound Material-Cycle Society, and Japan's Efforts

### Introduction ..... 58

### Chapter 1 The world in transition, and Japan's efforts to establish a Sound Material-Cycle Society ..... 60

Rapid economic growth associates the generation of huge amount of wastes and short supply of resources. We overview the Japanese efforts to establish a Sound Material-Cycle (SMC) society about both the Fundamental Plan for establishing a SMC Society in Japan and 3Rs Initiative in the world.

Section 1	The international situation related to waste management .....	60
Section 2	Japan's efforts directed towards establishing a SMC Society .....	65

## **Chapter 2 History of Japan's Sound Material-Cycle Society ..... 72**

Evidence from the Edo era strongly suggests that a sustainable society can be established through comprehensive promotion of a Low Carbon society, a society in harmony with nature and a SMC Society. Because Japan's historical experience such as hygiene recycling system of night soil and raw garbage is very beneficial for modern developing countries, we review the history of establishing a SMC Society in Japan.

Section 1	The Edo era and its systems for a sustainable society .....	72
Section 2	Japan's history of responsible disposal of waste, from the Meiji to Heisei eras .....	81

## **Chapter 3 Community-local-blocks-national-international-based SMC establishment ..... 89**

SMC blocks have been established at various levels these days. Cooperation and Collaboration among the different entities play a very important role to build up SMC blocks.

Section 1	Establishment of SMC blocks .....	89
Section 2	Resource circulation in SMC blocks ~ Examples that have led to successful revitalization of local communities .....	94
Section 3	Implementing more effective measures .....	101

## **Chapter 4 Prospects for establishing a SMC Society in East Asia, and Japan's cooperation ..... 108**

Japan has been making efforts to establish a SMC Society not only in East-Asia but also in the whole world aggressively. It is overviewed that Japan is assessing the needs in East-Asia countries and trying to make well-organized and comprehensive transfer of its technologies and systems to them.

Section 1	Formulating an East Asia Sound Material-Cycle Society Vision .....	108
Section 2	Establishing a SMC Society in Asia and provision of cooperation tailored to the needs .....	109
Section 3	Efforts to prevent illegal waste imports and exports .....	116
Section 4	Establishing an East Asia SMC block .....	119

## **Appendixes**

### **G8 Environment Ministers Meeting 2008 (Kobe, Japan May 24-26, 2008) ..... 122**

Chair's Summary G8 Environment Ministers Meeting .....	122
Kobe Call for Action for Biodiversity .....	128
Kobe 3R Action Plan .....	130

### **In pursuit of "Japan as a Low-carbon Society" Speech by H.E. Mr Yasuo Fukuda, Prime Minister at the Japan Press Club (9 June 2008) ..... 137**
