

Fuji-Hakone-Izu National Park

Volcanoes Stretching from the Pacific Ocean to Sacred Mt. Fuji: Diverse Landscapes Created by Volcano Topography and Culture.

Mt. Fuji is not simply Japan's highest mountain; it is a famous peak that is deeply rooted in the hearts of Japanese people and well-known throughout the world as a symbol of Japan. With Mt. Fuji located at its northern end, Fuji-Hakone-Izu National Park is a national park representative of Japan—a volcanic country—comprising various volcanic landforms within the Fuji Volcanic Zone as well as hot springs, richly varying coastlines, and islands. Fuji-Hakone-Izu National Park is divided into four areas: the Mt. Fuji Area, which is centered on Mt. Fuji and includes lakes, swamps, and plateaus in the surrounding area; the Hakone Area, which served

as a posting station on the Tokaido Road and has been renowned through the ages as a hot spring area; the Izu Peninsula Area, which offers the appeal of Amagi Mountain Range richly varying coastlines, and hot springs; and the Izu Islands Area, which comprises the seven islands in the Izu Shichito Islands, including O-shima Island and Miyake-jima Island, which even today are active volcanoes. Providing views of graceful Mt. Fuji from all around yet located close to the metropolitan area, Fuji-Hakone-Izu National Park has the most visitors of any national park in Japan.

Date of Designation :
February 1, 1936

Area : 121,755 ha (land area)

Itinerary

Experience Hakone's unique volcanic terrain and landscape created by the long history and culture

The Hakone area has a long history and culture in addition to unique geographic features formed by volcanic eruptions. To feel the history, culture, and nature of the area, walk the old Tokaido Road from Hakone-Yumoto to Hakone Checkpoint, which is part of the Hakone Hachiri stretch of the Old Tokaido Road starting from Odawara on the coast of Kanagawa, and finish up in Mishima in Shizuoka via Hakone. After fully enjoying the wilderness of Hakone by mountain biking and hiking in the forest of Sengokuhara area and Lake Ashi, feel the energy of volcanoes at the peak of Mt. Koma and Owakudani, the epicenter of volcanic activity in Hakone.

web site
